

Single Phase Ultrafast Bridge Rectifiers

DESCRIPTION

This series of high-current single-phase bridge rectifiers are constructed with hermetically sealed rectifiers built with the same design and construction techniques used in military applications for the upmost in reliability. These include voidless glass encapsulation and internal "Category 1" metallurgical bonds. These 35A ultrafast rectifier bridges are available in multiple working peak reverse voltage ratings per leg.

Important: For the latest information, visit our website http://www.microsemi.com.

FEATURES

- Current ratings to 35 amps
- V_{RWM} from 50 to 150 volts (see <u>part nomenclature</u> for all options)
- 150 °C junction temperature
- Surge ratings to 25 amps
- Recovery times to 50 ns
- MIL-PRF-19500 similarity
- RoHS compliant versions available

APPLICATIONS / BENEFITS

- Fuse-in-glass diodes design
- Electrically isolated aluminum case

MECHANICAL and PACKAGING

CASE: Aluminum.

• TERMINALS: Tin/lead (Sn/Pb) or RoHS compliant matte tin.

MARKING: Alternating current input: AC

Cathode positive output: +

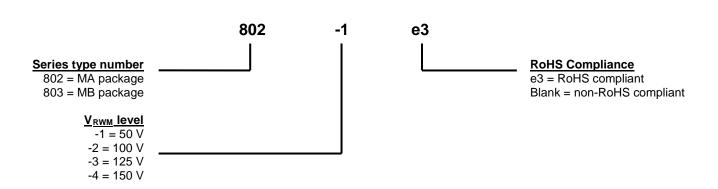

Anode negative: -

Part number is printed on the body

• WEIGHT: Approximately 20 grams for 802 series and 10 grams for 803 series

• See Package Dimensions on last page.

PART NOMENCLATURE

| SYMBOLS & DEFINITIONS | | | |
|-----------------------|---|--|--|
| Symbol | Definition | | |
| I _{FSM} | Surge Peak Forward Current: The forward current including all nonrepetitive transient currents but excluding all repetitive transients (ref JESD282-B) | | |
| Io | Average Rectified Output Current: The Output Current averaged over a full cycle with a 50 Hz or 60 Hz sine-wave input and a 180 degree conduction angle. | | |
| V_{FM} | Maximum Forward Voltage: The maximum forward voltage the device will exhibit at a specified current. | | |
| I _{RM} | Maximum Reverse Current: The maximum reverse (leakage) current that will flow at the specified voltage and temperature. | | |
| V_{RWM} | Working Peak Reverse Voltage: The peak voltage excluding all transient voltages (ref JESD282-B). Also sometimes known historically as PIV. | | |
| t _{rr} | Reverse Recovery Time: The time interval between the instant the current passes through zero when changing from the forward direction to the reverse direction and a specified decay point after a peak reverse current occurs. | | |
