

Low-Voltage, Single-Supply Dual SPST/SPDT Analog Switches

General Description

The MAX4541–MAX4544 are precision, dual analog switches designed to operate from a single +2.7V to +12V supply. Low power consumption (5 μ W) makes these parts ideal for battery-powered equipment. These switches offer low leakage currents (100pA max) and fast switching speeds (t_{ON} = 150ns max, t_{OFF} = 100ns max).

When powered from a +5V supply, the MAX4541–MAX4544 offer 2 Ω max matching between channels, 60 Ω max on-resistance (R_{ON}), and 6 Ω max R_{ON} flatness.

These switches also offer 5pC max charge injection and a minimum of 2000V ESD protection per Method 3015.7.

The MAX4541/MAX4542/MAX4543 are dual single-pole/single-throw (SPST) devices and the MAX4544 is a single-pole/double-throw (SPDT) device. The MAX4541 has two normally open (NO) switches and the MAX4542 has two normally closed (NC) switches. The MAX4543 has one NO and one NC switch and can be used as an SPDT, while the MAX4544 is an SPDT. The MAX4541/MAX4542/MAX4543 are available in tiny SOT23-8 and 8-pin TDFN packages, and the MAX4544 is available in a SOT23-6 package.

Applications

| | |
|------------------------------|------------------------|
| Battery-Operated Systems | Test Equipment |
| Sample-and-Hold Circuits | Communications Systems |
| Heads-Up Displays | +3V/+5V DACs and ADCs |
| Guidance and Control Systems | PBX, PABX |
| Audio and Video Switching | Cell Phones |
| Military Radios | Ultrasound |
| | Pagers |

Features

- ◆ 60 Ω max (33 Ω typ) Low R_{ON}
- ◆ 2 Ω max R_{ON} Matching Between Channels
- ◆ 6 Ω max R_{ON} Flatness
- ◆ 5pC max Guaranteed Charge Injection
- ◆ +2.7V to +12V Single-Supply Operation
- ◆ < 5 μ W Low Power Consumption
- ◆ Low Leakage Current Over Temperature: 10nA max at +85°C
- ◆ Fast Switching: t_{ON} = 35ns, t_{OFF} = 25ns
- ◆ Guaranteed Break-Before-Make (MAX4543/MAX4544 Only)
- ◆ TTL/CMOS-Logic Compatible
- ◆ Pin Compatible with MAX323/MAX324/MAX325
- ◆ MAX4541/MAX4542/MAX4543 Available in SOT23-8
MAX4544 Available in SOT23-6

Note 1: Signals on NC_, NO_, COM_, or IN_ exceeding V+ or V- are clamped by internal diodes. Limit forward diode current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

| Positive Supply Current | I_+ | $V_+ = 3.6V$, $V_{IN} = 0$ or V_+ , all channels on or off | | -1 | | +1 | μA |

Note 2: QFN and SOT-packaged parts are 100% tested at $+25^\circ C$ only and guaranteed by correlation at the full hot rated temperature.

Note 3: The algebraic convention, where the most negative value is a minimum and the most positive value a maximum, is used in this data sheet.

Note 4: Guaranteed by design.

Note 5: $\Delta R_{ON} = \Delta R_{ON\ max} - \Delta R_{ON\ min}$.

Note 6: Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal range.

Note 7: Leakage parameters are 100% tested at maximum rated hot temperature and guaranteed by correlation at $+25^\circ C$.

Note 8: Off-isolation = $20 \times \log_{10} [V_{COM} / (V_{NC} \text{ or } V_{NO})]$, V_{COM} = output, V_{NC} or V_{NO} = input to off switch.

Note 9: Between the two switches, MAX4541/MAX4542/MAX4543 only.

Applications Information

Figure 1. Overvoltage Protection Using Two External Blocking Diodes

Logic Levels

The MAX4541–MAX4544 are TTL compatible when powered from a single +5V supply. When powered from other supply voltages, TTL compatibility is guaranteed and the logic inputs can be driven rail-to-rail. For example, with a +12V supply, IN1 and IN2 can be driven low to 0 and high to 12V. With a +3.3V supply, IN1 and IN2 should be driven low to 0 and high to 3.3V.

Driving IN1 and IN2 rail-to-rail minimizes power consumption.

Analog Signal Levels

Analog signals that range over the entire supply voltage (V+ to GND) can be switched with very little change in on-resistance over the entire voltage range (see the *Typical Operating Characteristics*). All the switches are bidirectional, so the NO_, NC_, and COM_ pins can be used as either inputs or outputs.

Low-Voltage, Single-Supply Dual SPST/SPDT Analog Switches

MAX4541-MAX4544

Power-Supply Sequencing and Overvoltage Protection

Do not exceed the absolute maximum ratings because stresses beyond the listed ratings may cause permanent damage to the devices.

Proper power-supply sequencing is recommended for all CMOS devices. Always apply V+ before applying analog signals or logic inputs, especially if the analog or logic signals are not current limited. If this sequencing is not possible, and if the analog or logic inputs are not current limited to < 10mA, add a small-signal diode (D1) as shown in Figure 1. If the analog signal can dip below GND, add D2. Adding protection diodes reduces the analog signal range to a diode drop (about 0.7V) below V+ (for D1), and to a diode drop above ground (for D2). Leakage is unaffected by adding the diodes. On-resistance increases by a small amount at low supply voltages. Maximum supply voltage (V+) must not exceed 13V.

Adding protection diodes causes the logic thresholds to be shifted relative to the power-supply rails. This can be significant when low supply voltages (+5V or less) are used. With a +5V supply, TTL compatibility is not guaranteed when protection diodes are added. Driving IN1 and IN2 all the way to the supply rails (i.e., to a diode drop higher than the V+ pin, or to a diode drop lower than the GND pin) is always acceptable.

Protection diodes D1 and D2 also protect against some overvoltage situations. With Figure 1's circuit, if the supply voltage is below the absolute maximum rating, and if a fault voltage up to the absolute maximum rating is applied to an analog signal pin, no damage will result.

8. SOLDER THICKNESS MEASURED AT FLAT SECTION OF LEAD BETWEEN 0.08mm AND 0.15mm FROM LEADTIP.
9. LEAD TO BE COPLANAR WITHIN 0.1mm.
10. NUMBER OF LEADS SHOWN ARE FOR REFERENCE ONLY.
11. MARKING IS FOR PACKAGE ORIENTATION REFERENCE ONLY.

| SYMBOL | MIN | NOMINAL | MAX |
|--------|-----------|---------|------|
| A | 0.90 | 1.25 | 1.45 |

PKG CODES: K8-1, K8-2, K8S-3, K8F-4, K8FH-4, K8-5, K8C-6; K8SN-1; K8CN-1

NOTE:
 1. ALL DIMENSIONS ARE IN MILLIMETERS.
 2. FOOT LENGTH MEASURED FROM LEAD TIP TO UPPER RADIUS OF HEEL OF THE LEAD PARALLEL TO SEATING PLANE C.
 3. PACKAGE OUTLINE EXCLUSIVE OF MOLD FLASH & METAL BURR.
 4. PACKAGE OUTLINE INCLUSIVE OF SOLDER PLATING.
 5. COPLANARITY 4 MILS. MAX.
 6. MARKING IS FOR PACKAGE ORIENTATION REFERENCE ONLY.
 7. SOLDER THICKNESS MEASURED AT FLAT SECTION OF LEAD BETWEEN 0.08mm AND 0.15mm FROM LEAD TIP.
 8. MEETS JEDEC MO178 VARIATION BA.
 9. ALL DIMENSIONS APPLY TO BOTH LEADED (-) AND LEAD FREE (+) PACKAGE CODES.

-DRAWING NOT TO SCALE-

SOT23, 8L EPS

Revision History

Pages changed at Rev 4: 1-16

Maxim cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim product. No circuit patent licenses are implied. Maxim reserves the right to change the circuitry and specifications without notice at any time.
