

# RS9116 n-Link™ and WiSeConnect™ Wi-Fi® and Dual-Mode Bluetooth® 5 Wireless Connectivity CC0 Module Solutions

## Overview

### 1.1 Features

#### Wi-Fi

- Compliant to 1x1 IEEE 802.11 a/b/g/n with dual band (2.4 and 5 GHz) support
- Transmit power up to +18 dBm in 2 GHz and +13.5 dBm in 5 GHz
- Receive sensitivity as low as -96 dBm in 2 GHz and -89 dBm in 5 GHz
- Data Rates: 802.11b: Up to 11 Mbps; 802.11g/a: Up to 54 Mbps; 802.11n: MCS0 to MCS7
- Operating Frequency Range: 2412 MHz – 2484 MHz, 4.9 GHz – 5.975 GHz

#### Bluetooth

- Transmit power up to +17 dBm with integrated PA
- Receive sensitivity: LE: -92 dBm, LR 125 Kbps: -103 dBm
- Compliant to dual-mode Bluetooth 5
- <8 mA transmit current in Bluetooth 5 mode, 2 Mbps data rate
- Data rates: 125 Kbps, 500 Kbps, 1 Mbps, 2 Mbps, 3 Mbps
- Operating Frequency Range: 2.402 GHz - 2.480 GHz
- Bluetooth 2.1 + EDR, Bluetooth Low Energy 4.0 / 4.1 / 4.2 / 5.0
- Bluetooth Low Energy 1 Mbps, 2 Mbps and Long Range modes
- Bluetooth Low Energy Secure connections
- Bluetooth Low Energy supports central role and peripheral role concurrently
- Bluetooth auto rate and auto TX power adaptation
- Scatternet\* with two slave roles while still being visible

#### RF Features

- Integrated baseband processor with calibration memory, RF transceiver, high-power amplifier, balun and T/R switch
- Dual external antenna (diversity supported)

LGA Module (9.1 x 9.8 x 1.6) mm

#### Power

##### Consumption (2.4 GHz)

- Wi-Fi Standby Associated mode current: 102 uA @ 1 second beacon interval
- Wi-Fi 1 Mbps Listen current: 14 mA
- Wi-Fi LP chain Rx current: 20 mA
- Deep sleep current <1 uA, Standby current (RAM retention) < 10 uA

##### Operating Conditions

- Wide operating supply range: 1.75 V to 3.63 V
- Operating temperature: -40 °C to +85 °C (Industrial grade)

##### Size

- Small Form Factor: 9.1 x 9.8 x 1.6 mm

##### Software Operating Modes

- Hosted mode (n-Link™): Wi-Fi stack, Bluetooth stack and profiles and all network stacks reside on the host processor
- Embedded mode (WiSeConnect™): Wi-Fi stack, TCP/IP stack, IP modules, Bluetooth stack and some profiles reside in RS9116; Some of the Bluetooth profiles reside in the host processor

##### Hosted Mode (n-Link™)

- Available host interfaces: SDIO 2.0 and USB HS
- Support for 20 MHz channel bandwidth
- Application data throughput up to 50 Mbps (Hosted Mode) in 802.11n with 20 MHz bandwidth
- Host drivers for Linux
- Support for Client mode, Access point mode (Up to 16 clients), Concurrent Client and Access Point mode, and Enterprise Security
- Support for concurrent Wi-Fi, dual-mode Bluetooth 5

##### Embedded Mode (WiSeConnect™)

- Available host interface: UART, SPI, and USB CDC
- Support for Embedded Client mode, Access Point mode (Up to 8 clients), Concurrent Client and Access Point mode, and Enterprise Security

- Supports advanced security features: WPA/WPA2-Personal and Enterprise
- Integrated TCP/IP stack, HTTP/HTTPS, SSL/TLS, MQTT
- Bluetooth inbuilt stack support for L2CAP, RFCOMM, SDP, SPP, GAP
- Bluetooth profile support for GAP, SDP, SPP, GATT, L2CAP, RFCOMM
- Wireless firmware update and provisioning
- Support for concurrent Wi-Fi, dual-mode Bluetooth 5

### Security

- Accelerators: AES128/256 in Embedded Mode
- WPA/WPA2-Personal, WPA/WPA2 Enterprise for Client

### Software and Regulatory Certification

- Wi-Fi Alliance\*
- Bluetooth Qualification\*
- Regulatory certifications (FCC, IC, CE/ETSI, TELEC)\*

### Evaluation Kit

- Dual Band EVK: RS9116X-DB-EVK1

\* For a detailed list of software features and available profiles, refer to the Software Reference Manuals or contact Silicon Labs for availability.

All power and performance numbers are under ideal conditions.

## 1.2 Applications

### Wearables

Smart Watches, Wristbands, Fitness Monitors, Smart Glasses, etc.

### Smart Home

Smart Locks, Motion/Entrance Sensors, Water Leak sensors, Smart plugs/switches, LED lights, Door-bell cameras, Washers/Dryers, Refrigerators, Thermostats, Consumer Security cameras, Voice Assistants, etc.

### Other Consumer Applications

Toys, Anti-theft tags, Smart dispensers, Weighing scales, Blood pressure monitors, Blood sugar monitors, Portable cameras, etc.

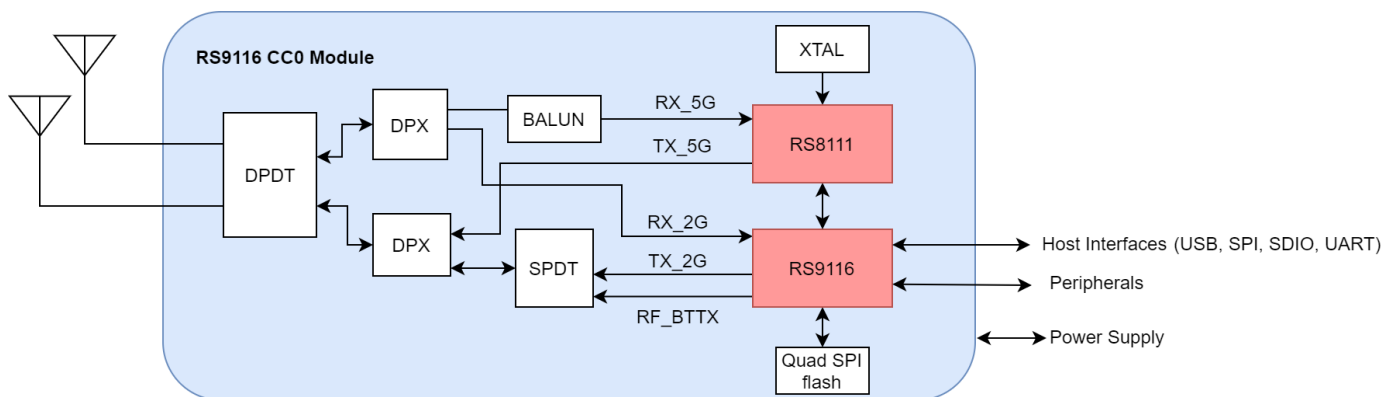

### Other Applications (Medical, Industrial, Retail, Agricultural, Smart City, etc.)

Healthcare Tags, Medical patches/pills, Infusion pumps, Sensors/actuators in Manufacturing, Electronic Shelf labels, Agricultural sensors, Product tracking tags, Smart Meters, Parking sensors, Street LED lighting, Automotive After-market, Security Cameras, etc.

## 1.3 Description

Silicon Labs' RS9116 dual band CC0 module provide a comprehensive multi-protocol wireless connectivity solution including 802.11 a/b/g/n (2.4 GHz and 5 GHz), and dual-mode Bluetooth 5. The modules offer high throughput, extended range with power-optimized performance. The modules are FCC, IC, and ETSI/CE (including EN 300 328 v2.2.2) certified.

Table 3. Host and Peripheral Interfaces

1. **"Default"** state refers to the state of the device after initial boot loading and firmware loading is complete.
2. **"Sleep"** state refers to the state of the device after entering Sleep state which is indicated by Active-Low "SLEEP\_IND\_FF".
3. Please refer to **"RS9116N Open Source Driver Technical Reference Manual"** for software programming information in embedded mode.
4. Please refer to **"RS9116W SAPI Programming Reference Manual"** for software programming information in embedded mode.
5. There are some functionalities, such as SLEEP\_IND\_FROM\_DEV, that are available on multiple pins. However, these pin functionalities are not available on all pins. Any pin can be used based on the required functionality. Customer has to note the default states before using appropriate pin.

All numbers are at typical operating conditions unless otherwise stated.

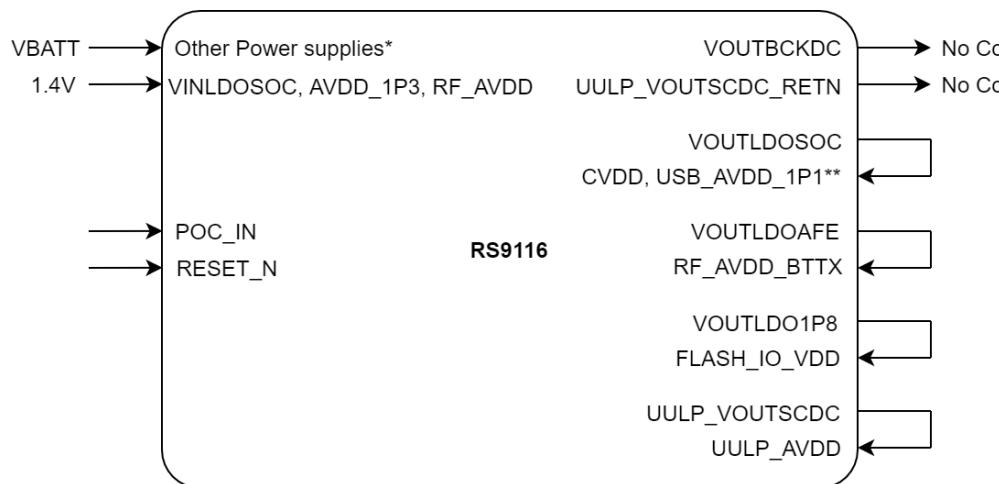

### 3.2.2 Power Sequence

The POC\_IN and RESET\_N signals should be controlled from external sources such as R/C circuits, and/or other MCU's GPIO. POC\_IN through an R-C, if the supply voltage is 3.3V. Below waveforms show power sequence (Up & Down) requirements and waveforms are not to scale.

#### 3.2.2.1 Power-Up and Down Sequence with External 1.4V supply and POC\_IN

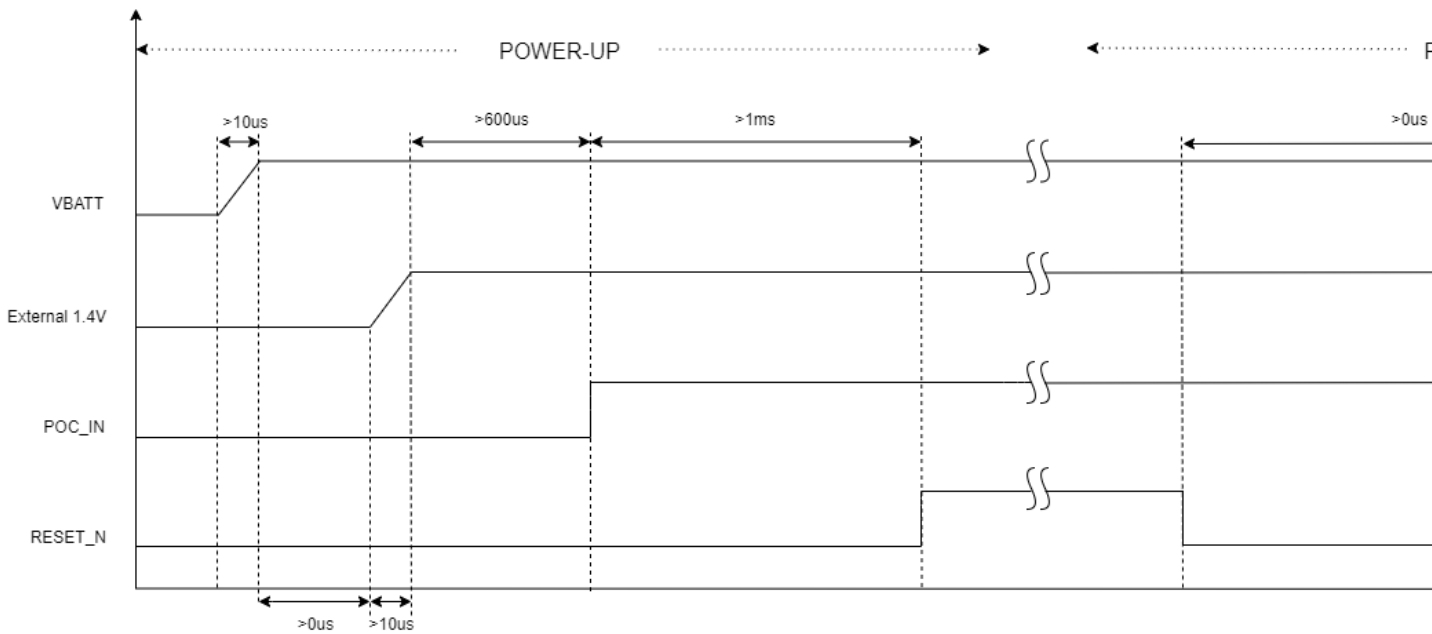

The diagram below shows connections of various power supply voltages, POC\_IN and RESET\_N. These connections can be used as follows:

- System PMU (outside RS9116) can provide 1.4V supply, and hence the internal Buck regulator in RS9116 can be disabled.
- The 1.1V supply is still derived from LDO SoC (internal to RS9116).
- POC\_IN is controlled externally.

#### NOTE:

1. Above shown is a typical connection diagram. Some of the supply pins shown above may or may not be present in the IC/MCU datasheet and connect accordingly.
2. \* = Provide the supply voltages as per the specifications mentioned in this datasheet.
3. \*\* = USB power supply input connection is required if USB interface is present and used. Else, follow the connection as shown.

**NOTE:**

1. VBATT supply shown above must be connected to the power supply pins of IC/Module. For example, SDIO\_IO\_VDD, ULP
2. Above POC\_IN waveform is applicable if it is externally driven. Else, that particular waveform can be ignored, and the RES external power supplies ramp-up/down.

3.2.2.2 Power-Up and Down Sequence with External POC\_IN

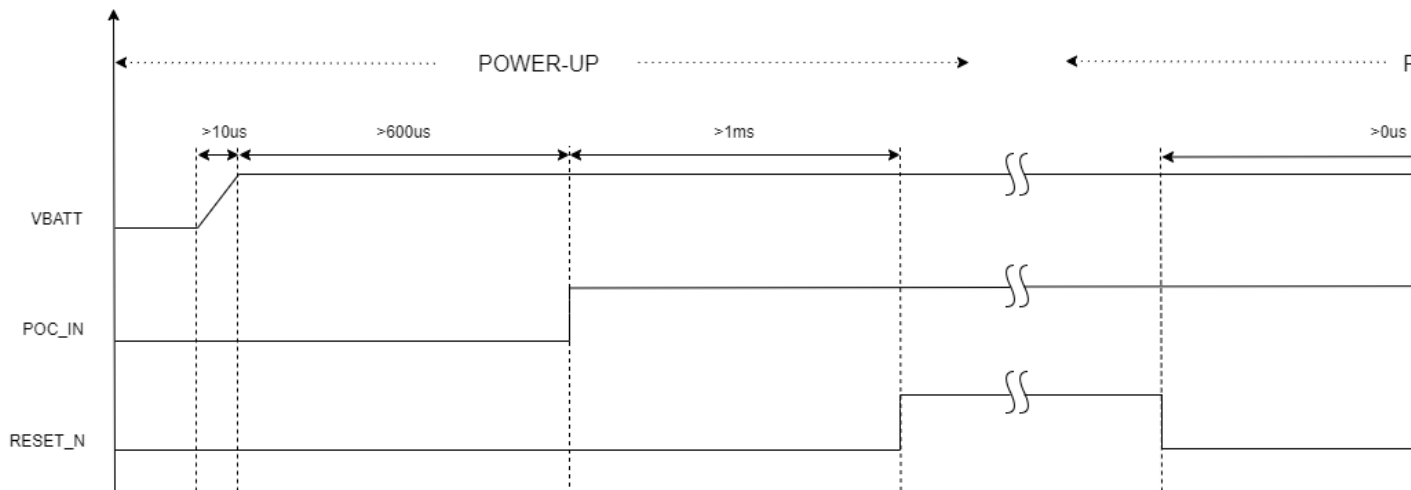

The diagram below shows connections of various power supply voltages, POC\_IN and RESET\_N. These connections can be u

- System PMU cannot provide 1.4V or 1.1V supplies and the internal buck and LDO of RS9116 are used.
- POC\_IN is controlled externally.

**NOTE:**

1. Above shown is a typical connection diagram. Check the Reference Schematics for connections of other power supplies.

**NOTE:**

1. VBATT supply shown above must be connected to the power supply pins of IC/Module. For example, SDIO\_IO\_VDD, ULP

3.2.2.3 Power-Up and Down Sequence with POC\_IN connected internally

The diagram below shows connections of various power supply voltages, POC\_IN and RESET\_N. The typical applications of this connection is **Not Recommended for New Design**.

- System cannot provide external 1.4V & 1.1V supplies and the internal buck and LDO of RS9116 are used.
- POC\_IN is looped back from POC\_OUT.

**NOTE:**

1. Above shown is a typical connection diagram. Check the Reference Schematics for connections of other power supplies.
2. POC\_OUT can be connected to POC\_IN if the supply voltage is 3.3V only. Else, POC\_IN has to be driven externally.
3. This connection is **Not Recommended for New Design**, and it is recommended to drive POC\_IN externally as shown in the diagram. If POC\_IN is driven externally, then an RC circuit delay can be provided in between POC\_IN and POC\_OUT, for delaying the POC\_OUT signal.

**NOTE:**

1. VBATT supply shown above must be connected to the power supply pins of IC/Module. For example, SDIO\_IO\_VDD, ULP

## 3.3 AC Characteristics

### 3.3.1 Clock Specifications

RS9116 chipsets require two primary clocks:

- Low frequency 32 kHz clock for sleep manager and RTC
  - Internal 32 kHz RC clock is used for applications with low timing accuracy requirements
  - 32 kHz crystal clock is used for applications with high timing accuracy requirements
- High frequency 40 MHz clock for the ThreadArch® processor, baseband subsystem and the radio
  - 40 MHz clock is integrated inside the module, and no external clock needs to be provided

The chipsets have integrated internal oscillators including crystal oscillators to generate the required clocks. Integrated crystal oscillators enable the use of low-cost passive crystal components. Additionally, in a system where

an external clock source is already present, the clock can be reused. The following are the recommended options for the clocks for different functionalities:

Functionality	Default Clock option	Other Clock option	Comments
Wi-Fi or Wi-Fi + BLE Connectivity	Internal 32 kHz RC oscillator calibrated to <200ppm	32 kHz XTAL oscillator input on UULPGPIO.	32 kHz XTAL Oscillator clock is optional. No significant power consumption impact on connected power numbers (<10uA).
Wi-Fi + BT or Wi-Fi + BT + BLE Connectivity with low power Audio Streaming operation (A2DP Source)	32 kHz XTAL oscillator input on UULPGPIO	Internal 32 kHz RC oscillator calibrated to <200ppm	32 kHz XTAL Oscillator clock is important for Low-power Audio Streaming operation (A2DP Source).

There is no impact on sleep/deep-sleep power consumption with/without 32 kHz XTAL oscillator clock

**32 kHz XTAL sources:**

**Option 1:** From Host MCU/MPU LVCMOS rail to rail clock input on UULPGPIO

**Option 2:** External Xtal oscillator providing LVCMOS rail to rail clock input on UULPGPIO (Nano-drive clock should not be supplied).

3.3.1.1 32 kHz Clock

The 32 kHz clock selection can be done through software. RC oscillator clock is not suited for high timing accuracy applications and can increase system current consumption in duty-cycled power modes.

3.3.1.1.1 RC Oscillator

Parameter	Parameter Description	Min	Typ	Max	Units
F <sub>osc</sub>	Oscillator Frequency		32.0		kHz

**Table 27. WLAN 2.4 GHz Transmitter Characteristics (3.3V)**

1. There is a variation of up to 2 dB in power across channels.
2. To meet FCC emission limits, band edge channels (1 and 11) TX Power has to be reduced by up to 4 dB in lower data rates and up to 3 dB in higher data rates. The radiated power in band edge is a strong function of the antenna properties. Refer to AN1337 application note for more details on the certifications.
3. The output power may degrade by up to 6 dB over the operating temperature range of -40 °C to +85 °C.
4. There may be a reduction in EVM of up to 2 dB in MCS6 data rate, and 3 dB in MCS7 data rate.
5. *IEEE spectral mask limits may be crossed in lower data rates in some channels, and if required power may be backed off by 1-2 dB.*

## 4 RS9116 CC0 Module Detailed Description

### 4.1 Overview

The RS9116 CC0 module is based on Silicon Labs' RS9116 ultra-low-power, single spatial stream, 802.11n + BT/BLE5.0 Convergence SOC. The RS9116 CC0 module is FCC, IC, CE and TELEC certified and provides low-cost CMOS integration of a multi-threaded MAC processor (ThreadArch®), baseband digital processing, analog front-end, calibration eFuse, 2.4GHz RF transceiver, 5GHz RF transceiver, matching networks, antenna diversity switch (DPDT) and Quad-SPI Flash thus providing a fully-integrated solution for a range of hosted and embedded wireless applications. With Silicon Labs' embedded four-threaded processor and on-chip ROM and RAM, these modules enable integration into low-cost and zero host load applications. With an integrated PMU and support for a variety of digital peripherals, RS9116 enables very low-cost implementations for wireless hosted and embedded applications. It can be connected to a host processor through SDIO, USB, SPI or UART interfaces. Wireless firmware upgrades and provisioning are supported.

### 4.2 Module Features

#### 4.2.1 WLAN

- Compliant to 1x1 IEEE 802.11 a/b/g/n with dual band (2.4 and 5 GHz) support
- Transmit power up to +18 dBm in 2 GHz and +13.5 dBm in 5 GHz
- Receive sensitivity as low as -96 dBm in 2 GHz and -89 dBm in 5 GHz
- Data Rates: 802.11b: Up to 11 Mbps; 802.11g/a: Up to 54 Mbps; 802.11n: MCS0 to MCS7
- Operating Frequency Range: 2412 MHz – 2484 MHz, 4.9 GHz – 5.975 GHz

##### 4.2.1.1 MAC

- Conforms to IEEE 802.11b/g/n/j standards for MAC
- Dynamic selection of fragment threshold, data rate, and antenna depending on the channel statistics
- Hardware accelerators for WEP 64/128-bit and AES
- WPA, WPA2, and WMM support
- AMPDU and AMSDU aggregation for high performance
- Firmware downloaded from host based on application
- Hardware accelerators for DH (for WPS)

##### 4.2.1.2 Baseband Processing

- Supports DSSS for 1, 2 Mbps and CCK for 5.5, 11 Mbps
- Supports all OFDM data rates (6, 9, 12, 18, 24, 36, 48, 54 Mbps, MCS0 to MCS7), and Short GI in Hosted mode
- Supports IEEE 802.11n single-stream modes with data rates up to 150 Mbps
- Supports long, short, and HT preamble modes
- High-performance multipath compensation in OFDM, DSSS, and CCK modes

#### 4.2.2 Bluetooth

- Transmit power up to +18 dBm with integrated PA
- Receive sensitivity: LE: -93 dBm, LR 125 Kbps: -104 dBm
- Compliant to dual-mode Bluetooth 5
- <8 mA transmit current in Bluetooth 5 mode, 2 Mbps data rate
- Data rates: 125 Kbps, 500 Kbps, 1 Mbps, 2 Mbps, 3 Mbps
- Operating Frequency Range: 2.402 GHz – 2.480 GHz
- Bluetooth 2.1 + EDR, Bluetooth Low Energy 4.0 / 4.1 / 4.2 / 5.0

- Bluetooth Low Energy 1 Mbps, 2 Mbps and Long Range modes
- Bluetooth Low Energy Secure connections
- Bluetooth Low Energy supports central role and peripheral role concurrently
- Bluetooth auto rate and auto TX power adaptation
- Scatternet\* with two slave roles while still being visible

\* For a detailed list of software features and available profiles, refer to the Software Reference Manuals or contact Silicon Labs for availability.

#### 4.2.2.1 MAC

##### 4.2.2.1.1 Link Manager

- Creation, modification & release of logical links
- Connection establishment between Link managers of two Bluetooth devices
- Link supervision is implemented in Link Manager
- Link power control is done depending on the inputs from Link Controller
- Enabling & disabling of encryption & decryption on logical links
- Services the data transport requests from L2CAP and provides required QOS
- Support for security using ECDH hardware accelerator

##### 4.2.2.1.2 Link Controller

- Encodes and decodes header of BT packets
- Manages flow control, acknowledgment, retransmission requests, etc.
- Stores the last packet status for all logical transports
- Chooses between SCO & ACL buffers depending on the control information coming from BBP resource manager
- Indicates the success status of packet transmission to upper layers
- Indicates the link quality to the LMP layer

##### 4.2.2.1.3 Host Controller

- Receives & decodes commands received from the Bluetooth Host.
- Propagates the decoded commands to respective modules
- Responsible for transmitting and receiving packets from and to Host
- Formats the responses coming from other modules of Bluetooth Controller as events and sends them to the Host.

##### 4.2.2.1.4 Device Manager

- Controls Scan & Connection processes
- Controls all BT Device operations except data transport operations
- Storing link keys
- BT Controller state transition management
- Slot synchronization & management
- Access contract management
- Scheduler

#### 4.2.2.2 Baseband Processing

- Supports GFSK (1 Mbps), EDR-DQPSK, EDR-D8PSK
- Supports BLE and Bluetooth long range

- Supports Data rates up to 3 Mbps

#### 4.2.3 RF Transceiver

- Integrated 2.4 GHz transceiver with highly programmable operating modes
- Integrated 5 GHz transceiver with highly programmable operating modes
- Integrated matching networks and diplexers
- Integrated antenna DPDT switch with optional antenna diversity
- Internal oscillator with 40 MHz crystal
- Inbuilt automatic boot up and periodic calibration enables ease of integration

#### 4.2.4 Host Interfaces

- SDIO
  - Version 2.0-compatible
  - Supports SD-SPI, 1-bit, and 4-bit SDIO modes
  - Operation up to a maximum clock speed of 50 MHz
- SPI Interface
  - Operation up to a maximum clock speed of 100 MHz
- USB 2.0
  - Supports 480Mbps “High Speed” (HS), 12Mbps “Full Speed” (FS) and 1.5Mbps “Low Speed” (LS) serial data transmission
  - Support USB CDC and device mode
- UART
  - Supports variable baud rates between 9600 and 3686400 bps
  - AT command interface for configuration and data transmission/reception

**NOTE:** Hosted mode (n-Link) supports USB 2.0 and SDIO. Embedded Mode (WiSeConnect) supports SPI, USB CDC, and UART.

##### 4.2.4.1 Auto Host detection

RS9116 detects the host interface automatically after connecting to respective host controllers like SDIO, SPI, UART, USB and USB-CDC. SDIO/SPI host interface is detected through the hardware packet exchanges. UART host interface is detected through the software based-on the received packets on the UART interface. USB-Device mode interface is detected through the hardware based-on VBUS signal level. The host interface detection between USB & USB-CDC will be taken care by the firmware based on the USB\_CDC\_DIS GPIO. This Host configuration is stored in always-on domain registers after detection (on power up) and reused this information at each wakeup.

#### 4.2.5 Wireless Coexistence Manager

- Arbitration between Wi-Fi, Bluetooth, and Bluetooth Low Energy
- Application aware arbitration
- Adaptive frequency hopping (AFH) in Bluetooth is based on WLAN channel usage
- Pre inter thread interrupts generation for radio switching
- QoS assurance across different traffics

#### 4.2.6 Software

The RS9116 software package supports 802.11 b/g/n Client, Access Point (Up to 16 clients), Concurrent Client and Access Point mode, Enterprise Security, dual-mode BT 5.0 functionality on a variety of host platforms and operating systems. The software package includes complete firmware, reference drivers, application profiles and configuration graphical user interface (GUI) for Linux operating systems. The Wi-Fi driver has support for a simultaneous access point, and client mode. Bluetooth host driver utilizes Opensource host stacks like BlueZ for Linux. The

application layer supports all profiles supported by BlueZ on Linux. It has a wireless coexistence manager to arbitrate between protocols.

The RS9116 software package is available in two flavors

- **Hosted mode (n-Link™):** Wi-Fi stack, Bluetooth stack and profiles, and all network stacks reside on the host processor. Support for multiple Virtual Access Points available.
- **Embedded mode (WiSeConnect™):** Wi-Fi stack, TCP/IP stack, IP modules, Bluetooth stack and some profiles reside in RS9116; Some of the Bluetooth profiles reside in the host processor

**NOTE:** Please refer to the Software Manuals (TRM and PRM) in [RS9116 Document Library](#) for more details.

#### 4.2.6.1 Hosted Mode (n-Link™)

- Available host interfaces: SDIO 2.0 and USB HS
- Support for 20 MHz channel bandwidth
- Application data throughput up to 50 Mbps (Hosted Mode) in 802.11n with 20 MHz bandwidth
- Host drivers for Linux
- Support for Client mode, Access point mode (Up to 16 clients), Concurrent Client and Access Point mode, and Enterprise Security
- Support for concurrent Wi-Fi, dual-mode Bluetooth 5

#### 4.2.6.2 Embedded Mode (WiSeConnect™)

- Available host interface: UART, SPI, and USB CDC
- Support for Embedded Client mode, Access Point mode (Up to 8 clients), Concurrent Client and Access Point mode, and Enterprise Security
- Supports advanced security features: WPA/WPA2-Personal and Enterprise
- Integrated TCP/IP stack, HTTP/HTTPS, SSL/TLS, MQTT
- Bluetooth inbuilt stack support for L2CAP, RFCOMM, SDP, SPP, GAP
- Bluetooth profile support for GAP, SDP, SPP, GATT, L2CAP, RFCOMM
- Wireless firmware update and provisioning
- Support for concurrent Wi-Fi, dual-mode Bluetooth 5

\* For a detailed list of software features and available profiles, refer to the Software Reference Manuals or contact Silicon Labs for availability.

### 4.2.7 Security

RS9116 supports multiple levels of security capabilities available for the development of IoT devices.

- Accelerators: AES128/256 in Embedded Mode
- WPA/WPA2-Personal, WPA/WPA2 Enterprise for Client

\* For a detailed list of software features and available profiles, refer to the Software Reference Manuals or contact Silicon Labs for availability.

### 4.2.8 Power Management

The RS9116 chipsets have an internal power management subsystem, including DC-DC converters and linear regulators. This subsystem generates all the voltages required by the chipset to operate from a wide variety of input sources.

- LC DC-DC switching converter for RF and Digital blocks

- Wide input voltage range (1.85 to 3.6V) on pin VINBCKDC
- Output – 1.4V and 300mA maximum load on pin VOUTBCKDC
- SC DC-DC – Switching converter for Always-ON core logic domain
  - Wide input voltage range (1.85 to 3.6V) on pin UULP\_VBATT\_1 and UULP\_VBATT\_2
  - Output – 1.05V
- LDO SOC – Linear regulator for digital blocks
  - Input – 1.4V from LC DC-DC or external regulated supply on pin VINLDOSOC
  - Output – 1.15V and 300mA maximum load on pin VOUTLDOSOC
- LDO RF and AFE - Linear regulator for RF and AFE
  - Input – 1.4V from LC DC-DC or external regulated supply on pin RF\_AVDD
  - Output – 1.1V and 20mA maximum load on pin VOUTLDOAFE
- LDO FLASH – Linear regulator for internal and external Flash
  - Input – Wide input voltage range (1.85 to 3.6V) on pin VINLDO1P8. VINLDO1P8 is an internal pin that is not terminated on the package, and it is not accessible.
  - Output – 1.8V and 20mA maximum load on pin VOUTLDO1P8

#### 4.2.8.1 Output Voltage Ranges

Pin Description	Supply Voltage (V)	
	Min	Max
VOUTLDOSOC	1.05	1.2
VOUTLDO1P8	1.75	2.0
VOUTBCKDC	1.25	1.55
VOUTLDOAFE	1.0	1.2
UULP_VOUTSCDC	1.02	1.122
UULP_VOUTSCDC_RETN	0.715	1.122

**Table 36. Min. and Max. specifications of various output voltages**

The output voltages from the IC/module will be reflected as per specifications only after the firmware is loaded.

#### 4.2.9 Low Power Modes

It supports Ultra-low power consumption with multiple power modes to reduce the system energy consumption.

- Dynamic Voltage and Frequency Scaling
- Low Power (LP) mode with only the host interface active
- Deep sleep (ULP) mode with only the sleep timer active – with and without RAM retention
- Wi-Fi standby associated mode with automatic periodic wake-up
- Automatic clock gating of the unused blocks or transit the system from Normal to LP or ULP modes

##### 4.2.9.1 ULP Mode

In Ultra Low Power mode, the deep sleep manager has control over the other subsystems and processors and controls their active and sleep states. During deep sleep, the always-on logic domain operates on a lowered supply and a 32 kHz low-frequency clock to reduce power consumption. The ULP mode supports the following wake-up options:

- Timeout wakeup – Exit sleep state after programmed timeout value.

- GPIO Based Wakeup: Exit sleep state when GPIO goes High/Low based on programmed polarity.
- Analog Comparator Based wakeup – Exit sleep state on an event at the analog comparator.
- RTC Timer wakeup – Exit Sleep state on timeout of RTC timer
- WatchDog Interrupt based wakeup - Exit Sleep state upon watchdog interrupt timeout.

ULP mode is not supported in the USB interface mode

#### 4.2.9.2 LP Mode

In Low Power mode, Network processor maintains system state and gate all internal high frequency clocks. But host interface is ready to accept any command from host controller.

The LP mode supports the following wake-up options:

- Host Request – Exit sleep state on a command from HOST controller. Whenever a command from the host is received, the processor serves the request with minimum latency and the clock is gated immediately after the completion of the operation to reduce power consumption
- GPIO based wakeup - Wakeup can be initiated through a GPIO pin
- Timeout wakeup – Exit sleep state after the programmed timeout value

### 4.2.10 Memory

#### 4.2.10.1 On-chip Memory

The ThreadArch® processor has the following memory:

- On-chip SRAM for the wireless stack.
- 512Kbytes of ROM which holds the Secure primary bootloader, Network Stack, Wireless stacks and security functions.
- 16Kbytes of Instruction cache enabling eXecute In Place (XIP) with quad SPI flash memory.
- eFuse of 512 bytes (used to store primary boot configuration, security and calibration parameters)

#### 4.2.10.2 Serial Flash

The RS9116 utilizes a serial Flash to store processor instructions and other data. The SPI Flash Controller is a 1/2/4-wired interface for serial access of data from Flash. It can be used in either Single, Dual or Quad modes. Instructions are read using the Direct Fetch mode while data transfers use the Indirect Access mode. The SPI Flash Controller in RS9116 has been designed with programmable options for most of the single and multi-bit operations. RS9116 CC0 module has 4 Mbytes internal flash memory.

## 5 RS9116 CC0 Module Reference Schematics, BOM and Layout Guidelines

1. Customers should include provision for programming or updating the firmware at manufacturing.
2. If using UART, we recommend bringing out the SPI lines to test points, so designers could use the faster interface for programming.
3. If using SPI as host interface, then firmware programming or update can be done through the host MCU, or if designer prefers UART, then it is recommended to have test points on the SPI signals.

### 5.1 SDIO/SPI/UART

#### 5.1.1 Schematics

The diagram below shows the typical schematic with SDIO/SPI/UART Host Interface.

**Figure 16. Schematics with SDIO/SPI/UART Host Interface**

1. The supplies can be driven by different voltage sources within the recommended operating conditions specified in Specific
2. SDIO\_IO\_VDD can be driven by a different source irrespective of other sources to support different interfaces.
3. In the SDIO mode, pull-up resistors should be present on SDIO\_CMD & SDIO Data lines as per the SDIO physical layer s
4. In SPI mode, ensure that the input signals, SPI\_CS and SPI\_CLK are not floating when the device is powered up and rese ensuring that the host processor configures its signals (outputs) before deasserting the reset. SPI\_INTR is the interrupt sig may be configured as Active-high or Active-low. If it is active-high, an external pull-down resistor is required. If it is active-l The following action can be carried out by the host processor during power-up of the device, and before/after ULP Sleep m
  - a. To use the signal in the Active-high or Active-low mode, ensure that, during the power up of the device, the Interru deasserting the reset. After deasserting the reset, the Interrupt needs to be enabled only after the SPI initialization programmed to either Active-high or Active-low mode as required.
  - b. The Host processor needs to be disable the interrupt before the ULP Sleep mode is entered and enable it after SF from ULP Sleep.
5. In UART mode, ensure that the input signals, UART\_RX and UART\_CTS are not floating when the device is powered up a by ensuring that the host processor configures its signals (outputs) before deasserting the reset.
6. Resistor “R1” should not be populated if UART is used as Host Interface.

### 5.3 Layout Guidelines

1. The following Supply Pins needs to be STAR routed from the Supply Source
  - a. VINBCKDC
  - b. ULP\_IO\_VDD
  - c. SDIO\_IO\_VDD
  - d. IO\_VDD\_1
  - e. UULP\_VBATT\_1
  - f. UULP\_VBATT\_2
  - g. PA2G\_AVDD
  - h. PA5G\_AVDD
  - i. RF\_VBATT
  - j. RF\_AVDD33
  - k. AVDD\_1P9\_3P3
2. The RF\_PORT2 (Module Pin No. N14) signal may be directly connected to an on-board chip antenna or terminated in an RF connector of any form factor for enabling the use of external antennas.
3. There need to be DC blocking capacitors (8.2pF) on RF\_PORT2 & RF\_PORT1 if they are connected to Antennas
4. The RF traces on RF\_PORT1 and RF\_PORT2 should have a characteristic impedance of 50 Ohms. Any standard 50 Ohms RF trace (Microstrip or Coplanar wave guide) may be used. The width of the 50 Ohms line depends on the PCB stack, e.g., the dielectric of the PCB, thickness of the copper, thickness of the dielectric and other factors. Consult the PCB fabrication unit to get these factors right.
5. To evaluate transmit and receive performance like Tx Power and EVM, Rx sensitivity and the like, an RF connector would be required. Since Antenna is connected to RF\_PORT2, connect U.FI connector to RF\_PORT1 for RF related test & evaluation.
6. The layout Guidelines for the BUCK are as follows:-
 

Minimize the loop area formed by inductor switching node, output capacitors & input capacitors. This helps keep high current paths as short as possible. Keeping high current paths shorter and wider would help decrease trace inductance & resistance. This would significantly help increase the efficiency in high current applications. This reduced loop area would also help in reducing the radiated EMI that may affect nearby components.

  - a. VINBCKDC Capacitor should be very close to the Module Pin & the Ground Pad of the capacitor should have direct vias to the Ground Plane underneath.
  - b. Buck Inductor should be close to Module VOUTBCKDC pin and buck capacitor should be placed closed to the Inductor, the Ground Pad of the capacitor should have direct vias to the Ground Plane underneath.
  - c. The Ground Plane underneath the Buck Inductor in the Top Layer should be made as an isolated copper patch and should descend down to the Second Layer (Main Ground) through multiple Vias.
  - d. The path from VOUTBCKDC to VINLDOSOC is a high current path. The Trace should be as short & wide as possible and is recommended to run a Grounded Shield Traces on either side of this High Current Trace
  - e. The capacitor on VINLDOSOC should be very close to the Module Pin & the Ground Pad of the capacitor should have direct vias to the ground plane underneath.
7. For USB, it is recommended that the components and their values in the BoM be adhered to.
8. It is highly recommended that the two USB differential signals (USB\_DP and USB\_DN) be routed in parallel with a spacing (say, a) which achieves 90  $\Omega$  of differential impedances, 45  $\Omega$  for each trace.

Figure 18. Spacing between USB\_DP and USB\_DM

- In order to minimize crosstalk between the two USB differential signals (USB\_DP and USB\_DN) and other signal traces routed close to them, it is recommended that a minimum spacing of  $3 \times a$  be maintained for low-speed non-periodic signals and a minimum spacing of  $7 \times a$  be maintained for high-speed periodic signals.

Figure 19. Spacing for Low-Speed and High-Speed Signals Around USB\_DP/USB\_DN

- It is recommended that the total trace length of the signals between the RS9116 module and the USB connector be less than 450mm.
- If the USB high-speed signals are routed on the Top layer, best results will be achieved if Layer2 is a Ground plane. Furthermore, there must be only one ground plane under high-speed signals in order to avoid the high-speed signals crossing to another ground plan

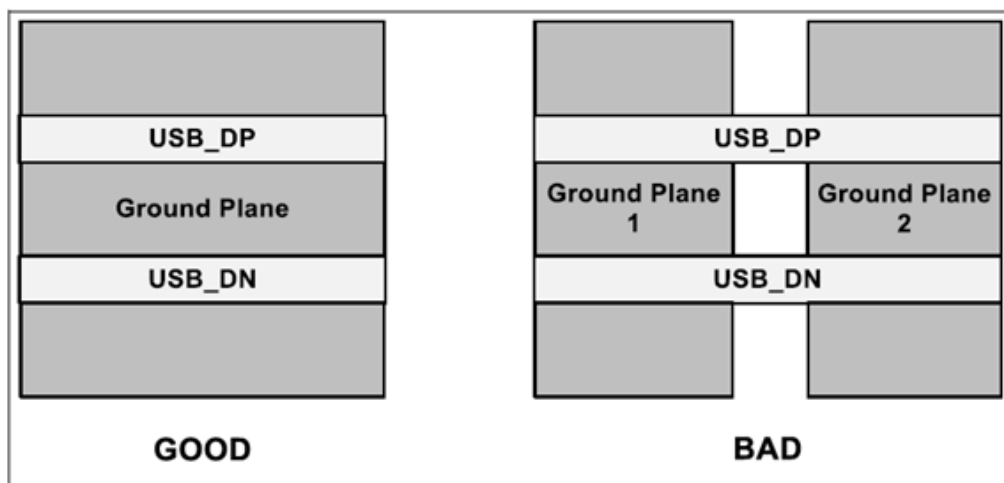

Figure 20. USB Signals and the Ground Plane

- Each GND pin must have a separate GND via.
- All decoupling capacitors placement must be as much close as possible to the corresponding power pins, and the trace lengths as short as possible.

14. Ensure all power supply traces widths are sufficient enough to carry corresponding currents.
15. Add GND copper pour underneath IC/Module in all layers, for better thermal dissipation.

**Note:**

When using Chip Antenna from vendors, the Chip Antenna layout guidelines provided by the vendor need to be used.

## 7 RS9116 CC0 Module Certification and Ordering Information

### 7.1 Certification Information

This section will outline the regulatory certification information for the RS9116 modules for the countries listed below. This information will be updated when available.

1. United States
2. Canada
3. Europe
4. Japan
5. Other Regulatory Jurisdictions

The RS9116 Dual band CC0 module from Silicon Labs has undergone modular certification for FCC, IC and CE/ETSI (including EN 300 328 v2.2.2). Note that any changes to the module's configuration including (but not limited to) the programming values of the RF Transceiver and Baseband can cause the performance to change beyond the scope of the certification. These changes, if made, may result in the module having to be certified afresh. The table below lists the details of the regulatory certifications. The certification for geographies not listed in the table is in progress.

### 7.2 Compliance and Certification

M7DB6 and M7DB modules are FCC/IC/CE/MIC certified. This section outlines the regulatory information for the M7DB6/M7DB modules. This allows integrating the modules in an end product without the need to obtain subsequent and separate approvals from these regulatory agencies. This is valid in the case no other intentional or un-intentional radiator components are incorporated into the product and no change in the module circuitry. Without these certifications, an end product cannot be marketed in the relevant regions.

- RF Testing Software is provided for any end product certification requirements.

#### 7.2.1 Federal Communication Commission Statement

Any changes or modifications not expressly approved by the party responsible for compliance could void your authority to operate the equipment.

##### Note

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

#### 7.2.1.1 RF Exposure Statements

1. This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

- This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and your body or nearby persons.

For a host using a certified modular with a standard fixed label, if (1) the module's FCC ID is not visible when installed in the host, or (2) if the host is marketed so that end users do not have straightforward commonly used methods for access to remove the module so that the FCC ID of the module is visible; then an additional permanent label referring to the enclosed module should be used. For M7DB6 module, "Contains Transmitter Module FCC ID: XF6-M7DB6" or "Contains FCC ID: XF6-M7DB6" must be used; for M7DB module, "Contains Transmitter Module FCC ID: XF6-M7DB7" or "Contains FCC ID: XF6-M7DB7" must be used. The host OEM user manual must also contain clear instructions on how end users can find and/or access the module and the FCC ID.

#### 7.2.1.2 Labeling and User Information

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference, and
- this device must accept any interference received, including interference that may cause undesired operation.

### 7.2.2 Industry Canada / ISED Statement

This product meets the applicable Innovation, Science and Economic Development Canada technical specifications. Ce produit répond aux spécifications techniques applicables à l'innovation, Science et Développement économique Canada.

#### 7.2.2.1 Radiation Exposure Statement

This equipment complies with IC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

Cet équipement est conforme aux limites d'exposition aux rayonnements IC établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec un minimum de 20 cm de distance entre la source de rayonnement et votre corps.

This device complies with Industry Canada license-exempt RSSs. Operation is subject to the following two conditions:

- This device may not cause interference, and
- This device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes :

- l'appareil ne doit pas produire de brouillage;
- l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

#### 7.2.2.2 Labeling and User Information

**Innovation, Science and Economic Development Canada ICES003 Compliance Label: CAN ICES-3 (B)/NMB-3(B)**

The M7DB6 module has been labeled with its own IC ID number (8407A-M7DB6) and if the IC ID is not visible when the module is installed inside another device, then the outside of the finished product into which the module is installed must also display a label referring to the enclosed module. This exterior label can use following wording: For M7DB6 modules, Contains Transmitter Module IC ID: 8407A-M7DB6 or Contains IC ID: 8407A-M7DB6. For M7DB modules, Contains Transmitter Module IC ID: 8407A-M7DB7 or Contains IC ID: 8407A-M7DB7. User manuals for license-exempt radio apparatus shall contain the above mentioned statement or equivalent notice in a conspicuous location in the user manual or alternatively on the device or both.

#### Warning:

- The device for operation in the band 5150–5250 MHz is only for indoor use to reduce the potential for harmful interference to co-channel mobile satellite systems;
- For devices with detachable antenna(s), the maximum antenna gain permitted for devices in the bands 5250-5350 MHz and 5470-5725 MHz shall be such that the equipment still complies with the e.i.r.p. limit;
- For devices with detachable antenna(s), the maximum antenna gain permitted for devices in the band 5725-5850 MHz shall be such that the equipment still complies with the e.i.r.p. limits specified for point-to-point and non-point-to-point operation as appropriate; and

The high-power radars are allocated as primary users (i.e. priority users) of the bands 5250-5350 MHz and 5650-5850 MHz and that these radars could cause interference and/or damage to LE-LAN devices.

DFS (Dynamic Frequency Selection) products that operate in the bands 5250- 5350 MHz, 5470-5600MHz, and 5650-5725MHz.

This device is not capable of transmitting in the band 5600-5650 MHz in Canada.

#### Avertissement:

6. Le dispositif fonctionnant dans la bande 5150-5250 MHz est réservé uniquement pour une utilisation à l'intérieur afin de réduire les risques de brouillage préjudiciable aux systèmes de satellites mobiles utilisant les mêmes canaux;
7. Le gain maximal d'antenne permis pour les dispositifs avec antenne(s) amovible(s) utilisant les bandes 5250-5350 MHz et 5470-5725 MHz doit se conformer à la limitation P.I.R.E.;
8. Le gain maximal d'antenne permis pour les dispositifs avec antenne(s) amovible(s) utilisant la bande 5725-5850 MHz doit se conformer à la limitation P.I.R.E spécifiée pour l'exploitation point à point et non point à point, selon le cas.

En outre, les utilisateurs devraient aussi être avisés que les utilisateurs de radars de haute puissance sont désignés utilisateurs principaux (c.-à-d., qu'ils ont la priorité) pour les bandes 5250-5350 MHz et 5650-5850 MHz et que ces radars pourraient causer du brouillage et/ou des dommages aux dispositifs LAN-EL.

Les produits utilisant la technique d'atténuation DFS (sélection dynamique des fréquences) sur les bandes 5250-5350 MHz, 5470-5600MHz et 5650-5725MHz.

Cet appareil ne peut pas émettre dans la bande 5600-5650 MHz au Canada.

### 7.2.3 CE

M7DB6 is in conformity with the essential requirements and other relevant requirements of the R&TTE Directive (1999/5/EC). The product is conformity with the following standards and/or normative documents.

- EMC (immunity only) EN 301 489-17 V.2.2.1 in accordance with EN 301 489-1 V1.9.2
- Radiated emissions EN 300 328 V1.9.1
- Safety standards: EN 60950-1:2006 + A11:2009 + A1:2010 + A12:2011 + A2:2013

### 7.2.4 TELEC

Telefication, operating as Conformity Assessment Body (CAB ID Number:201) with respect to Japan, declares that the M7DB6 complies with Technical Regulations Conformity Certification of specified Radio equipment (ordinance of MPT N° 37,1981)

- The validity of this Certificate is limited to products, which are equal to the one examined in the type-examination
- when the manufacturer (or holder of this certificate) is placing the product on the Japanese market, the product must affixed with the following Specified Radio Equipment marking R201-190292

### 7.2.5 Qualified Antenna Types

This device has been designed to operate with the antennas listed below. Antennas not included in this list or having a gain greater than listed gains in each region are strictly prohibited for use with this device. The required antenna impedance is 50 ohms.

Any antenna that is of the same type and of equal or less directional gain can be used without a need for retesting. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that permitted for successful communication. Using an antenna of a different type or gain more than certified gain will require additional testing.

			<ul style="list-style-type: none"> <li>Added a note under Pin Description regarding functionalities that are available on multiple Pins, and their proper usage. Eg. SLEEP_IND_FROM_DEV</li> <li>Updated Generic PCB Layout Guidelines.</li> <li>Updated Power Sequence Diagrams under DC Characteristics for POC_IN and POC_OUT.</li> <li>Features list updated.</li> <li>Reflow profile diagram updated.</li> <li>Updated Typical values for BLE ACI characteristics.</li> <li>Updated GPIO pin descriptions.</li> </ul>
7	1.0.6	August, 2020	<ul style="list-style-type: none"> <li>Updated datasheet to reflect data specific to CC0.</li> <li>Updated Features List, removed redundant information.</li> <li>Updated Applications, and Software Architecture Diagrams.</li> <li>Updated pin descriptions – ULP_GPIO_0 and ULP_GPIO_6.</li> <li>Updated Software section with latest information.</li> <li>Rebranded to Silicon Labs.</li> </ul>
8	1.0.7	September, 2020	<ul style="list-style-type: none"> <li>Updated Device Information with new nomenclature to include Silicon revision, and firmware version.</li> <li>Updated schematics to include the new nomenclature.</li> <li>SoC Ordering information updated with new OPNs; Device Nomenclature diagram updated.</li> </ul>
9	1.0.8	December, 2020	<ul style="list-style-type: none"> <li>Updated 2.4 GHz TX numbers using new gain tables.</li> <li>Band separation and updated values provided for TX and RX for 5 GHz RF characteristics.</li> <li>Updated Feature Set for Embedded Mode.</li> <li>Included DTIM 1 &amp; 3 values at 5 GHz.</li> <li>Included qualified antenna types for M7DB7 module.</li> <li>Updated Module Marking Info to include M7DB7 and Silicon Labs logo.</li> <li>Updated Layout Guidelines for Chip Antenna.</li> <li>Updated Device Nomenclature.</li> </ul>
10	1.0.9	June, 2021	<ul style="list-style-type: none"> <li>Module image updated with Silicon Labs logo.</li> <li>Added note under Software Architecture diagram on connecting and using multiple hosts at the same time.</li> <li>Included EN 300 328 v2.2.2 certification info.</li> <li>Removed redundant section 'Device Information'. Same information is available in section 'Ordering Information'.</li> <li>Pin names updated for consistency; included actual pin names along with signals; updated pins: UART1_RX, UART1_TX, UART2_TX, HOST_BYP_ULP_WAKEUP</li> <li>ULP_GPIOs in Pin Description referenced to ULP_IO_VDD instead of IO_VDD_1.</li> </ul>

Revision No.	Version No.	Date	Changes
			<ul style="list-style-type: none"> <li>• Updated note on Wake-on-Wireless feature, under Description for pin ULP_GPIO_6.</li> <li>• Removed ESD and Latch Up information from Absolute Ratings table.</li> <li>• Updated Min. and Max. values for RF related pins, ULP_IO_VDD, and PA2G_AVDD to reflect only 3.3 V in Recommended Operating Conditions.</li> <li>• Updated SDIO_IO_VDD pin to include both 1.8 V and 3.3 V values in Recommended Operating Conditions.</li> <li>• Power-Up and Down Sequence with POC_IN connected internally. Included statement that this connection is NRND.</li> <li>• Updated <math>V_{IH}</math>, <math>V_{OH}</math> to show only Min. values; <math>V_{IL}</math>, <math>V_{OL}</math> to show only Max. values; <math>I_{OL}</math>, <math>I_{OH}</math> to show only Typ. values.</li> <li>• Updated 32 kHz External Crystal Oscillator specifications to reflect correct Min and Max values for Vac.</li> <li>• Removed 40 MHz crystal specification because the crystal is integrated inside the module. Added a note under Clock Specifications.</li> <li>• Timing data included for SDIO_CMD.</li> <li>• Updated temperature and characterization variations for RF Tx and Rx readings.</li> <li>• Added caveats to RF Characteristics.</li> <li>• Updated RF Specification section to include numbers at 3.3 V only.</li> <li>• Updated 2.4 GHz Transmitter characteristics at 11 Mbps and 6 Mbps to reflect corrected values based on latest ATE power index table.</li> <li>• Updated Note for IEEE spectral mask effects. Added mention of AN1337 application note for certification details.</li> <li>• Included output voltage power ranges under Power Management.</li> <li>• Typical Current Consumption section updated to include values at 3.3 V only.</li> <li>• Updated Power Consumption numbers for WLAN at 2.4 GHz and 5 GHz.</li> <li>• Updated Murata's 1uH inductor part in Schematics and BOM from DFE201210S-1R0M=P2 to DFE201210U-1R0M=P2.</li> <li>• Module M7DB7 rebranded to M7DB as per existing naming guidelines.</li> <li>• Removed Device Nomenclature.</li> <li>• Removed Reflow Profile, Soldering and Baking instructions. Information available through the web based RFI system.</li> <li>• Datasheet updated from Preliminary to Full Production.</li> </ul>
