Trench gate field-stop IGBT, V series 600 V, 60 A very high speed

Datasheet - production data

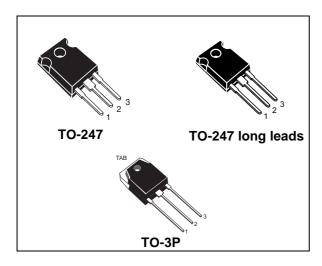

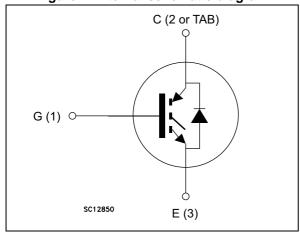

Figure 1. Internal schematic diagram

#### **Features**

- Maximum junction temperature: T<sub>J</sub> = 175 °C
- Tail-less switching off
- V<sub>CE(sat)</sub> = 1.85 V (typ.) @ I<sub>C</sub> = 60 A
- Tight parameter distribution
- · Safe paralleling
- · Low thermal resistance
- · Very fast soft recovery antiparallel diode

#### **Applications**

- Photovoltaic inverters
- Uninterruptible power supply
- Welding
- Power factor correction
- · Very high frequency converters

### **Description**

These devices are IGBTs developed using an advanced proprietary trench gate field-stop structure. These devices are part of the V series of IGBTs, which represents an optimum compromise between conduction and switching losses to maximize the efficiency of very high frequency converters. Furthermore, a positive  $V_{\text{CE(sat)}}$  temperature coefficient and very tight parameter distribution result in safer paralleling operation.
