

### General Description

The XR31233, XR31234 and XR31235 are controller area network (CAN) transceivers that conform to the ISO 11898 standard. Each provides transmit and receive signaling rates up to 1Mbps between a differential CAN bus and a CAN controller.

These devices are designed with cross-wire protection, overvoltage protection up to ±36V, loss of ground protection, thermal shutdown protection and common-mode transient protection of ±100V making them ideal for harsh environments used in industrial, automotive, transportation and building automation applications.

The low power consumption of the 3.3V supply makes these CAN transceivers desirable and are fully interoperable with 5V supplied transceivers on the same bus. They also offer high speed, slope control and low-power standby modes of operation.

### FEATURES

- Single 3.3V operation
- ±36V fault tolerance on analog bus pins
- Extended -25V to +25V common mode operation
- Robust ESD protection:
  - ±16kV HBM (bus pins)
  - ±8kV contact discharge (bus pins)
  - ±3kV HBM (non-bus pins)
- Up to 1Mbps data rates
- 11898-2 ISO compatible
- GIFT/ICT compliant
- 5V tolerant LVTTTL I/O's
- 200µA low current standby mode
- XR31233: Loopback mode
- XR31234: Ultra low current sleep mode
  - 50nA typical
- XR31235: Autobaud loopback mode

### APPLICATIONS

- Industrial control systems
- Motor and robotic control
- Building and climate control (HVAC)
- Automotive and transportation

**Absolute Maximum Ratings**

Stresses beyond the limits listed below may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition may affect device reliability and lifetime.

V <sub>CC</sub> .....	-0.3V to 7V
Voltage at any bus terminal (CANH or CANL)..	-36V to 36V
Voltage input, transient pulse, CANH and CANL, through 100Ω (Figure 9) .....	-100V to 100V
Input voltage (D, RS, EN, LBK, AB) .....	-0.5V to 7V
Output voltage .....	-0.5V to 7V
Receiver output current .....	-10mA to 10mA
Continuous total power dissipation.....	540mW
Operating junction temperature .....	150°C
Storage temperature.....	-65°C to 150°C
Lead temperature (soldering 10 seconds).....	300°C

**Operating Conditions**

V <sub>CC</sub> supply range .....	3.0V to 3.6V
Operating temperature range .....	-40°C to 125°C
Package power dissipation, 8-pin NSOIC $\Theta_{JA}$ .....	128.4°C/W

**ESD Ratings**

Human Body Model (HBM), bus pins .....	±16kV
Human Body Model (HBM), non-bus pins .....	±3kV
IEC61000-4-2 (Contact Discharge), bus pins.....	±8kV

## Pin Functions

Pin Number	Pin Name	Type	Description			
1	D	Input	CAN transmit data input (LOW for dominant and HIGH for recessive bus states), also called TXD, driver input.			
2	GND	Power	Ground.			
3	VCC	Power	3.3V power supply input, bypass to ground with 0.1µF capacitor.			
4	R	Output	CAN receive data output (LOW for dominant and HIGH for recessive bus states), also called RXD, receiver output.			
5	LBK	Input	XR31233	Loopback mode input.	LBK = 1	Loopback mode. D input loops back to R output. D input does not drive or affect the activity of the CAN bus. Useful for checking connectivity and running diagnostics without disturbing the CAN bus.
					LBK = 0	Normal mode. D input drives CAN bus. If D = 0, the CAN bus is dominant. If D = 1 the CAN bus is recessive. See <a href="#">Figure 4.</a>
	EN	Input	XR31234	Enable input.	EN = 1	Normal mode. D input drives CAN bus. If D = 0, the CAN bus is dominant. If D = 1 the CAN bus is recessive. See <a href="#">Figure 4.</a>
					EN = 0	Sleep mode, low power.
	AB	Input	XR31235	Autobaud loopback mode input.	AB = 1	Autobaud loopback mode. Similar to loopback mode as the D input loops back to R output, except that the R output is a NOR function of the D input and the CAN bus activity. Useful for checking connectivity, running diagnostics and monitoring CAN bus activity, which allows local mode to detect and sync the baud rate up on the CAN bus.
					AB = 0	Normal mode. D input drives CAN bus. If D = 0, the CAN bus is dominant. If D = 1 the CAN bus is recessive. See <a href="#">Figure 4</a>
6	CANL	I/O	Low level CAN bus line.			
7	CANH	I/O	High level CAN bus line.			
8	RS	Input	Mode select pin: strong pulldown to GND = high speed mode, strong pullup to VCC = low power mode, 10kΩ to 100kΩ pulldown to GND = slope control mode.
