# Attention

The EZO-PMP™ Embedded Dosing Pump requires two power supplies to operate.

**12V – 24V**  
to drive the motor

**3.3V – 5.5V**  
for the control system

**Control system**  
(Back side of dosing pump)

# EZO-PMP™ tubing

## Tan tubing

Saint-Gobain™ PharMed™ BPT tubing

Length: 15.24cm

Outer diameter: 5mm

Inner diameter: 3mm

This tubing is highly chemically resistant and has 30X more resistant to mechanical wear than silicone tubing.

## Inline tubing connectors

HDPE

Length: 2.54cm

Outer diameter: 8mm

Inner diameter: 2.8mm

## Blue tubing

Silicone

Length: 2x 30.48cm

Outer diameter: 5mm

Bend radius: 15mm

Temperature -67°C to 200°C

Max pressure: 69 kPa (10 PSI)

# Operating principle

- ✓ Self-priming
- ✓ Run dry

# Operating modes

The EZO-PMP™ can operate in four different modes.

## Continuous dispensing

Run the pump continuously  
105 ml/min ∞ (with supplied tubing)

## Volume dispensing

Pump a specific volume  
(Smallest possible volume is 0.5 ml)

**Volume is always in ml.**

## Dose over time

Pump a specific volume over a set time

## Constant flow rate

Pump a specific volume per minute

## Dispense at startup

- Dispense a specific volume at startup
- Continuous dispensing at startup
- Dose over time at startup

**This device requires two power supplies**

3.3V–5.5V for the control system

12V–24V to drive the motor

**The Atlas Scientific EZO-PMP™ consists of three main components.**

**Cassette**

**12 volt motor**

**Control system**

The actual peristaltic pumping is done within the cassette. It has been designed to be easily detached from the motor and disassembled.

The 12 volt motor and control system have been soldered together. Both components are designed to operate as one single unit.

**The control system has three main components**

Keyed data and power connector

12–24 volt power input

- Green** – TX/SDA
- Black** – GND

# Constant flow rate

Maintain a constant flow rate

## Command syntax

After running in continuous mode for 20 days the EZO-PMP™ will reset.

**DC,[ml/min],[min or \*] <cr> [maintain this rate],[for this much time]**

**DC,? <cr> reports maximum possible flow rate**

[ml/min] = a single number (int or float) representing the desired flow rate

[min or \*] = the number of minutes to run or (\*) indefinitely

A negative value for ml/min = reverse

## Example

## Response

**DC,25,40 <cr>**

**\*OK <cr> Dispense 25ml per minute for 40 minutes**

**DC,? <cr>**

**?MAXRATE,58.5 <cr>**

## Example

## Wrong Example

# I<sup>2</sup>C mode

The I<sup>2</sup>C protocol is **considerably more complex** than the UART (RS-232) protocol. Atlas Scientific assumes the embedded systems engineer understands this protocol.

# Response codes

After a command has been issued, a 1 byte response code can be read in order to confirm that the command was processed successfully.

*Reading back the response code is completely optional, and is not required for normal operation.*

## Example

```
I2C_start;  
I2C_address;  
I2C_write(EZO_command);  
I2C_stop;
```

```
delay(300);
```

```
Processing delay
```

```
I2C_start;  
I2C_address;  
Char[ ] = I2C_read;  
I2C_stop;
```

If there is no processing delay or the processing delay is too short, the response code will always be 254.

### Response codes

Single byte, not string

255	no data to send
254	still processing, not ready

## Example

## Wrong Example

# Calibration theory

Uncalibrated accuracy +/- 5%

Calibrated accuracy +/- 1%

**Before calibration is attempted** all the air bubbles should be removed from the tubing. This is done by running the pump while tapping the tubing. If air bubbles are not removed from the tubing they will slowly group together into larger air bubbles. Over time this will lead to accuracy issues.

## Calibration types

Volume calibration

Volume over time calibration

Calibration is optional. Both types of calibration are independent of each other and can be done at any time. Calibration can be done at any volume however; Atlas Scientific recommends using volumes above 5ml.

## Equipment needed for calibration

An accurate graduated cylinder of at least 10ml.

Or

An accurate scale with a resolution of at least 0.1 grams

1 gram of water = 1ml  
23.56 grams of water = 23.56ml

# Calibration procedure

Calibration should be done with water and not a chemical

**Make sure the tubing is full of water and has no bubbles before calibrating.**

1. Instruct the pump to dispense a volume of water.
2. Measure the dispensed amount to determine how much water was actually dispensed.
3. Calibrate the pump by sending it the volume of liquid you have measured.

## Example

Calibrate the pump by dispensing 10ml

1. Instruct the pump to dispense 10ml into a graduated cylinder or beaker on a scale.
2. Measure the amount of liquid that was actually dispensed.
3. Inform the pump how much liquid was actually dispensed.
4. Calibration is now complete.

Once the pump has been calibrated, it will accurately dispense any volume of liquid. Use the same procedure to perform a volume over time calibration.

# Pump speed vs. voltage

There is no change in pump speed at different voltages.

# Interrupt pin

When the pump is dispensing the interrupt pin goes high.

# Removing cassette

Turn cassette counterclockwise until it stops.

Pull cassette off the motor.

# Removing tube assembly

The inner workings of the cassette are fragile and must be dismantled by hand. Using tools can damage or break the cassette.

# Installing new tube assembly

Measure 75mm of pump tubing, and mark both ends with a soft-tip pen or marker.

Apply silicone lubricating grease to the marked areas on both the tubing and cassette axle.

**Do not operate this device without lubrication!**

Atlas Scientific recommends using **Super Lube** silicone lubricating grease.

3

Push the tube holder along with the greased and marked pump tube into the cassette until it clicks.

4

Gently pull out the pump tube, and insert the rotor into the pump tube. Align pump tube and rotor with the cassette axle.

**Make sure the pump tube is held between the roller and cassette.**

✓ **Correct**

**X Incorrect**

Once the tubing has been replaced, run the pump for 3–5 minutes to break in the new tubing. **Remember, this pump can be run dry and does not need to pump liquid for the 3–5 minute break in period.**

# Viscosity

The EZO-PMP™ is capable of pumping liquids within a viscosity range of **0.1 – 2,000 cP**.

- 0.6 = Acetone
- 1 = Water
- 10 = Kerosene
- 100 = Corn Syrup
- 200 = Maple Syrup
- 2,000 = Honey
- 10,000 = Hershey Chocolate Syrup

## Dispense accuracy

## Pump head

Pump head refers to the maximum vertical height a pump can dispense. The EZO-PMP™ has a pump head of 8.1 meters (26.5').

# Mounting the EZO-PMP™

There are a many different ways to mount the EZO-PMP™ Embedded Dosing Pump. If you have a 3D printer you can use the dosing pump stand we created, by clicking [here](#). The dosing pump stand has been measured to perfectly fit the EZO-PMP™ and even has screw holes in place for you to help mount the dosing pump to the stand. Feel free to modify this stand design as needed.

However, if you would like to mount the EZO-PMP™ Embedded Dosing Pump into other materials, you will need the following tools:

**1 1/4"**  
**Hole Saw**

**1 3/8"**  
**Step Bit**

**1/8"**  
**Drill Bit**

Either are fine to make the larger hole.

Perfect for screw holes.

- Added commands for ease of manufacturing

# Warranty

Atlas Scientific™ Warranties the EZO-PMP™ Embedded Dosing Pump to be free of defect during the debugging phase of device implementation, or 30 days after receiving the EZO-PMP™ Embedded Dosing Pump (whichever comes first).

## The debugging phase

The debugging phase as defined by Atlas Scientific™ is the time period when the EZO-PMP™ Embedded Dosing Pump is inserted into a bread board, or shield. If the EZO-PMP™ Embedded Dosing Pump is being debugged in a bread board, the bread board must be devoid of other components. If the EZO-PMP™ Embedded Dosing Pump is being connected to a microcontroller, the microcontroller must be running code that has been designed to drive the EZO-PMP™ Embedded Dosing Pump exclusively and output the EZO-PMP™ Embedded Dosing Pump data as a serial string.

**It is important for the embedded systems engineer to keep in mind that the following activities will void the EZO-PMP™ Embedded Dosing Pump warranty:**

- **Soldering any part of the EZO-PMP™ Embedded Dosing Pump.**
- **Running any code, that does not exclusively drive the EZO-PMP™ Embedded Dosing Pump and output its data in a serial string.**
- **Embedding the EZO-PMP™ Embedded Dosing Pump into a custom made device.**
- **Removing any potting compound.**

# Reasoning behind this warranty

Because Atlas Scientific™ does not sell consumer electronics; once the device has been embedded into a custom made system, Atlas Scientific™ cannot possibly warranty the EZO-PMP™ Embedded Dosing Pump, against the thousands of possible variables that may cause the EZO-PMP™ Embedded Dosing Pump to no longer function properly.

## Please keep this in mind:

- 1. All Atlas Scientific™ devices have been designed to be embedded into a custom made system by you, the embedded systems engineer.**
- 2. All Atlas Scientific™ devices have been designed to run indefinitely without failure in the field.**
- 3. All Atlas Scientific™ devices can be soldered into place, however you do so at your own risk.**

Atlas Scientific™ is simply stating that once the device is being used in your application, Atlas Scientific can no longer take responsibility for the EZO-PMP™ Embedded Dosing Pumps continued operation. This is because that would be equivalent to Atlas Scientific™ taking responsibility over the correct operation of your entire device.
