MC100LVEL16

3.3V ECL Differential Receiver

ON Semiconductor®

www.onsemi.com

Description

The MC100LVEL16 is a differential receiver. The device is functionally equivalent to the EL16 device, operating from a 3.3 V supply. The LVEL16 exhibits a wider V_{IHCMR} range than its EL16 counterpart. With output transition times and propagation delays comparable to the EL16 the LVEL16 is ideally suited for interfacing with high frequency sources at 3.3 V supplies.

Under open input conditions, the Q input will be pulled down to V_{EE} and the $\overline{Q}$ input will be biased to $V_{CC}/2$. This condition will force the Q output low.

The V_{BB} pin, an internally generated voltage supply, is available to this device only. For single-ended input conditions, the unused differential input is connected to V_{BB} as a switching reference voltage. V_{BB} may also rebias AC coupled inputs. When used, decouple V_{BB} and V_{CC} via a 0.01 μF capacitor and limit current sourcing or sinking to 0.5 mA. When not used, V_{BB} should be left open.

Features

- 300 ps Propagation Delay
- High Bandwidth Output Transitions
- The 100 Series Contains Temperature Compensation
- PECL Mode Operating Range: V_{CC} = 3.0 V to 3.8 V with V_{EE} = 0 V
- NECL Mode Operating Range: V_{CC} = 0 V with V_{EE} = −3.0 V to −3.8 V
- Internal Input Pulldown Resistors on D, Pullup and Pulldown Resistors on $\overline{D}$
- Q Output will Default LOW with Inputs Open or at V_{EE}
- These Devices are Pb−Free, Halogen Free/BFR Free and are RoHS Compliant
