

PGR-6130 SERIES

Electronic Overload Relay

Simplified Circuit Diagram

Description

The PGR-6130 Electronic Overload Relay provides protection for small three-phase motors up to 1,000 Vac. No current transformers are required for currents up to 91 A. The protective functions include overload, overtemperature, phase unbalance, phase loss, and phase sequence. The PGR-6130 Electronic Overload Relay offers dependable protection and can be used on pumps, conveyor belts, ventilation fans and other small-motor applications that require standard protection.

Features & Benefits

FEATURES	BENEFITS
No CTs required	No current transformers required for currents up to 91 A, simplifies installation and reduces cost
Adjustable trip settings	Adjustable overload trip class setting from 5 to 35 to match motor characteristics
Output contacts	Form A and Form B ground-fault output contacts for operation of separate annunciation and trip circuits
Remote indication	Allows remote cause-of-trip indication and reset
Overload	Extends motor life and prevents insulation failures and fires
Phase loss/Phase sequence	Detects unhealthy supply conditions
Unbalance (current)	Prevents overheating due to unbalanced phases
PTC overtemperature	Detect high ambient or blocked ventilation and single phasing; prevents shaft/pump damage

Accessories

- A** **PGB-6130 Remote Indication and Reset Assembly**
Optional remote indication of overcurrent, phase unbalance, phase loss, phase sequence and overtemperature. Remote reset included.

Ordering Information

ORDERING NUMBER	CONTROL POWER	FULL-LOAD CURRENT
