page 1/2

Technical Data

| Housing dimensions (H x W x D) | 96 x 45 x 110.5 mm |
|--------------------------------|--|
| Housing type | DIN rail housing (for DIN rail version EN 50022) |
| Housing material | Polycarbonate |
| Weight | approx. 197 g / 224 g (incl. connectors) |
| IP Code | IP20 |
| Power supply | 12-24 V DC -15%-/ +20% |
| Max. power consumption | 20 Watt (incl. 1 A total USB output current) ¹ |
| Operating temperature | -40 °C+65 °C ² |
| Storage temperature | -40 °C+85 °C |
| Humidity (at 40°C) | 93% (non-condensing) |
| Interfaces | 2 x USB A (Total current draw from both sockets max. 1 A, deactivated) ³ 2 x RJ45 10/100 Ethernet (using separate MAC addresses) 1 x RS485 screw-type terminal (not galvanically isolated, deactivated) 1 x Micro-USB (solely for image transfer to eMMC) 1 x Micro HDMI (deactivated) 1 x PiBridge system bus (deactivated) 1 x ConBridge system bus (deactivated) |
| Connectors | 1 x 4-pole screw-type terminal for relay contact and signal input 1 x 4-pole screw-type terminal for power supply |
| Processor | Broadcom BCM2837 quad-core ARM Cortex A53 (ARMv8) |
| Clock rate | 1.2 GHz ² |
| Processor cooling | Passive with heat sink |
| RAM | 1 GByte |
| Flash memory | 4 GByte |

¹ The average power consumption without USB load varies greatly and depends on the use of the interfaces, the GPU and the CPU. It is usually well below 4 watts without HDMI.

² There should be no cutbacks of power at ambient temperatures below 20°C. At 25°C ambient temperature 3 cores may run with full clock speed while with 4 cores the clock frequency is lowered from 1.2 to 1.1 GHz after 10 to 20 minutes of full stress. At 40°C ambient temperature 4 cores under full stress will still work with 1 GHz while stressing just 1 core results in no down clocking. At 50°C ambient temperature 4 fully stressed cores are running at average 0.7 GHz, having short down clockings to 0.6 GHz and short up clockings to 0.9 GHz. 1 core under full stress does result in no down clocking. At 65°C ambient temperature and either 4 or 1 core under full stress results in an "emergency mode" with just 0.4 GHz, after longer periods even 0.3 GHz.

³ 1 A USB output current (total of both USB outputs) is only available for input voltages >11 V. The bridging time of at least 10 ms required by EN 61131-2 is only guaranteed with a 20.4 to 28.8 V power supply. With a 12 V power supply, this time is significantly reduced, especially when power is drawn from the USB ports.

Technical Data

| Number of digital input channels | 1 (deactivated) |
|---------------------------------------|--|
| Input type | 24 V control voltage |
| Input thresholds | approx. 3.0V (0 -> 1) / 2.3V (1 -> 0) |
| Input protection | against overvoltage, negative voltages |
| Number of digital output channels | 1 (deactivated) |
| Output type | Relay contact, approval up to 30 V switching voltage |
| Maximum current load of the contact | 2A @ 30V DC (resistive load!) |
| Protection of the power supply inputs | Reverse polarity protected, overvoltage protection |
| ESD protection | 4 kV / 8 kV (according to EN61131-2 and IEC 61000-6-2) |
| EMI tests | Passed (according to EN61131-2 and IEC 61000-6-2) |
| Surge/Burst tests | Passed (according to EN61131-2 and IEC 61000-6-2) |
| Buffer time R C | min. 24 h |
| Optical indicator | 6 status LEDs (bi-color) |
| Conformity | CE, RoHS |
| UL certification | Yes, UL-File-No. E494534 |
