Product Bin and Labeling Definitions

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins LED components for luminous flux, intensity, radiometric power, color point, peak wavelength, dominant wavelength and forward voltage.

LUXEON 3735 RGB LEDs are labeled using a 12-digit alphanumeric CAT code following the format below:

A B C D – Red

E F G H – Green

J K L M – Blue

Where:

A E J – designates intensity for the red, green and blue LED (example: B=440 to 520mcd, S=2200 to 2500mcd)

BC FG KL – designates color, dominant wavelength bin (example: Red 10=619 to 625nm, Green 20=520 to 525nm, Blue 31=468 to 471nm)

D H M – designates forward voltage bin (example: A=1.70 to 2.4V, B=2.60 to 3.40V)

Therefore, a LUXEON 3735 RGB LED with a red intensity of 975 to 1150mcd / color 619 to 625nm / forward voltage of 1.70 to 2.50V; green intensity of 2200 to 2500mcd / color 525 to 530nm / forward voltage of 2.60 to 3.40V; blue intensity of 440 to 520mcd / color 468 to 471nm and forward voltage of 2.60 to 3.40V has the following CAT Code:

H 1 0 A – Red

S 2 1 B – Green

B 3 1 B – Blue
