### GENERAL DESCRIPTION

TSV321/TSV358/TSV324 are the most cost-effective amplifiers for low voltage, low power consumption and low-cost applications. The rail-to-rail output and rail-to-rail inputs that exceed power supply range make the TSV321 series easy to use for very low voltage supply applications.

Low I<sub>B</sub> feature of these amplifiers allows the parts to be ideal for many sensor applications. 1MHz GBW and 0.8V/μs slew rate under low power supply voltage can meet almost all sensor requirement.

Small Packages:

TSV321 in a SOT23-5 and SC70-5

TSV358 in a SO8 and MSOP8

TSV324 in a SO14 and TSSOP14

## ESD CAUTION

ESD (Electrostatic Discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjects to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.
