The XD/XL3232 device consists of two line drivers, two line receivers, and a dual charge-pump circuit with±15-kV ESD protection pin to pin (serial-port connection pins, including GND). The device meets therequirements of TIA/EIA-232-F and provides the electrical interface between an asynchronous communicationcontroller and the serial-port connector. The charge pump and four small external capacitors allow operationfrom a single 3-V to 5.5-V supply. The devices operate at data signaling rates up to 250 kbit/s and a maximumof 30-V/μs driver output slew rate.

Storage temperature range, T_{stg} . . . . . −65°C to 150°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. All voltages are with respect to network GND.
2. Maximum power dissipation is a function of T_J(max), θ_{JA}, and T_A. The maximum allowable power dissipation at any allowable ambient temperature is $P_D = (T_J(max) - T_A)/\theta_{JA}$. Operating at the absolute maximum T_J of 150°C can affect reliability.
3. The package thermal impedance is calculated in accordance with JESD 51-7.
