## 2.9 Wireless Enable/Disable Switch

### CAUTION

Do not change the switch with the power on. Always turn off the power and unplug the power cord from the carrier board before changing a switch setting. Otherwise, the board could be damaged.

The 2-position switch determines whether the wireless module on the NUC Compute Element is enabled or disabled. Figure 4 shows the location of the switch. Table 8 describes the switch settings.

## 2.10 Intel® vPro® Technology

Intel® vPro™ Technology is a collection of platform capabilities that support enhanced manageability, security, virtualization and power efficiency.

### For information about

Intel® vPro® Technology

### Refer to

<http://support.intel.com/support/vpro/>

### NOTE

Intel® vPro® Technology is only supported on the Intel® NUC Pro Board Element if an Intel NUC Compute Element with Intel® vPro® Technology support is connected.

## 2.11 Power

The NUC Pro Board Element requires a 12-24 ± 8% V DC input via the back-panel power jack or the internal power connector. Both inputs provide delayed AC start as well as transient voltage suppression (TVS) at 26 V.

### NOTE

Total power required will need to take into account the NUC Pro Compute Element power requirements, the NUC Pro Board Element CMB1BB power requirements and any devices or peripherals that are plugged into the NUC Pro Board Element CMB1BB.

### CAUTION

*It is strongly recommended to make sure that the NUC Pro Board Element CMB1BB is powered off and AC power is removed before removing the NUC Compute Element from the board connector. Removing the NUC Compute Element from the board connector while powered on may cause damage to the NUC Compute Element, operating system corruption, create a no boot condition or result in data loss. If the Blue LED on the board is illuminated, do not remove the NUC Compute Element from the board connector*

## 2.12 Mechanical

The following figure illustrates the mechanical form factor for the Intel® NUC Pro Board Element CMB1BB. Dimensions are given in millimeters (mm).

41065

Figure 5. CMB1BB Dimensions

## 2.13 Thermal

The fundamental design of the Intel® NUC Compute Element relies on the chassis that the Intel® NUC Pro Board Element CMB1BB is installed into for proper cooling. Both internal components and external skin temperatures are critical parameters in proper cooling, and should be considered in any design. For best cooling performance, direct contact with a thermal management device to the bottom of the NUC Compute Element such as a heatsink or enclosure surface is recommended. This can be accomplished with active or passive cooling design approaches. Non-contact convection only cooling may be possible but will likely result in performance limitations or compromises in skin temperature levels relative to a conductive design approach.

The Integrated Heat Spreader side of the NUC Compute Element is the primary heat source. To provide adequate cooling of the NUC Compute Element while maintaining safe skin temperatures a thermal solution that contacts the entire metal portion of the Integrated Heat Spreader is recommended. Localized contact with the primary heat source on the NUC Compute Element bottom is not recommended as the location is subject to change with different generations of the NUC Compute Element. The Mylar side of the NUC Pro Compute Element does not typically require contact with a thermal solution, however proper air flow over the top of the NUC Compute Element is recommended.

For more detailed thermal design information, refer to the NUC Compute Element Carrier Board Design Guide available at [MyIntel](#).

## 2.14 Environmental

Table 9 lists the environmental specifications for the Intel® NUC Pro Board Element CMB1BB.

**Table 9. Environmental Specifications**

Note: Before attempting to operate this Intel® NUC Pro Board Element CMB1BB, the overall temperature of the system must be above the minimum operating temperature specified. It is recommended that the NUC Pro Board Element CMB1BB temperature be at least room temperature before attempting to power on the system. The operating and non-operating environment must avoid condensing humidity.

## 3 Characterized Errata

---

This section of the document communicates product Errata for the Intel® NUC Pro Board Element CMB1BB.

Errata are design defects or deviations from current published specifications for a given product. Published errata may or may not be corrected. Hardware and software designed to be used with any given processor stepping must assume that all errata documented for that process stepping are present on all devices.

There are no known characterized errata.
