

### 5 V, 16 kbit (2 Kb x 8) ZEROPOWER® SRAM

Datasheet - production data

#### **Features**

- Integrated, ultra low power SRAM and powerfail control circuit
- Unlimited WRITE cycles
- READ cycle time equals WRITE cycle time
- Automatic power-fail chip deselect and WRITE protection
- WRITE protect voltages
  - (V<sub>PFD</sub> = power-fail deselect voltage):
  - M48Z08:  $V_{CC}$  = 4.75 to 5.5 V; 4.5 V  $\leq$  V<sub>PFD</sub>  $\leq$  4.75 V
  - M48Z18:  $V_{CC} = 4.5 \text{ to } 5.5 \text{ V}$ ;  $4.2 \text{ V} \le V_{PED} \le 4.5 \text{ V}$
- Self-contained battery in the CAPHAT™ DIP package
- Pin and function compatible with JEDEC standard 2 K x 8 SRAMs
- RoHS compliant
  - Lead-free second level interconnect

#### **Description**

The M48Z08/18 ZEROPOWER® RAM is a 8 K x 8 non-volatile static RAM which is pin and function compatible with the DS1225.

The monolithic chip provides a highly integrated battery-backed memory solution.

The M48Z08/18 is a non-volatile pin and function equivalent to any JEDEC standard 8 K x 8 SRAM. It also easily fits into many ROM, EPROM, and EEPROM sockets, providing the non-volatility of PROMs without any requirement for special write timing or limitations on the number of writes that can be performed.

The 28-pin, 600 mil DIP CAPHAT™ houses the M48Z08/18 silicon with a long-life lithium button cell in a single package.

M48Z08, M48Z18 Operation modes

### 3 Operation modes

The M48Z08/18 also has its own power-fail detect circuit. The control circuitry constantly monitors the single 5 V supply for an out of tolerance condition. When  $V_{CC}$  is out of tolerance, the circuit write protects the SRAM, providing a high degree of data security in the midst of unpredictable system operation brought on by low  $V_{CC}$ . As  $V_{CC}$  falls below approximately 3 V, the control circuitry connects the battery which maintains data until valid power returns.

Table 2. Operating modes

Note:  $X = V_{IH}$  or  $V_{IL}$ :  $V_{SO}$  = battery backup switchover voltage.

#### 3.1 READ mode

The M48Z08/18 is in the READ mode whenever  $\overline{W}$  (WRITE enable) is high and  $\overline{E}$  (chip enable) is low. The device architecture allows ripple-through access of data from eight of 65,536 locations in the static storage array. Thus, the unique address specified by the 13 Address Inputs defines which one of the 8,192 bytes of data is to be accessed. Valid data will be available at the data I/O pins within address access time ( $t_{AVQV}$ ) after the last address input signal is stable, providing that the  $\overline{E}$  and  $\overline{G}$  access times are also satisfied. If the  $\overline{E}$  and  $\overline{G}$  access times are not met, valid data will be available after the latter of the chip enable access time ( $t_{ELQV}$ ) or output enable access time ( $t_{GLQV}$ ).

The state of the eight three-state data I/O signals is controlled by  $\overline{E}$  and  $\overline{G}$ . If the outputs are activated before  $t_{AVQV}$ , the data lines will be driven to an indeterminate state until  $t_{AVQV}$ . If the address inputs are changed while  $\overline{E}$  and  $\overline{G}$  remain active, output data will remain valid for output data hold time ( $t_{AXQX}$ ) but will go indeterminate until the next address access.

<sup>1.</sup> Valid for ambient operating temperature:  $T_A = 0$  to 70 °C;  $V_{CC} = 4.75$  to 5.5 V or 4.5 to 5.5 V (except where noted).

#### 3.2 WRITE mode

The M48Z08/18 is in the WRITE mode whenever  $\overline{W}$  and  $\overline{E}$  are active. The start of a WRITE is referenced from the latter occurring falling edge of  $\overline{W}$  or  $\overline{E}$ .

A WRITE is terminated by the earlier rising edge of  $\overline{W}$  or  $\overline{E}$ . The addresses must be held valid throughout the cycle.  $\overline{E}$  or  $\overline{W}$  must return high for a minimum of  $t_{EHAX}$  from chip enable or  $t_{WHAX}$  from WRITE enable prior to the initiation of another READ or WRITE cycle. Data-in must be valid  $t_{DVWH}$  prior to the end of WRITE and remain valid for  $t_{WHDX}$  afterward.  $\overline{G}$  should be kept high during WRITE cycles to avoid bus contention; although, if the output bus has been activated by a low on  $\overline{E}$  and  $\overline{G}$ , a low on  $\overline{W}$  will disable the outputs  $t_{WLQZ}$  after  $\overline{W}$  falls.

- 1. Valid for ambient operating temperature: T<sub>A</sub> = 0 to 70 °C; V<sub>CC</sub> = 4.75 to 5.5 V or 4.5 to 5.5 V (except where noted).
- 2.  $C_1 = 30 pF$ .
- 3. If  $\overline{E}$  goes low simultaneously with W going low, the outputs remain in the high impedance state.

#### 3.3 Data retention mode

With valid V<sub>CC</sub> applied, the M48Z08/18 operates as a conventional BYTEWIDE™ static RAM. Should the supply voltage decay, the RAM will automatically power-fail deselect, write protecting itself when V<sub>CC</sub> falls within the V<sub>PFD</sub> (max), V<sub>PFD</sub> (min) window. All outputs become high impedance, and all inputs are treated as "don't care."

Note:

A power failure during a WRITE cycle may corrupt data at the currently addressed location, but does not jeopardize the rest of the RAM's content. At voltages below  $V_{PFD}$  (min), the user can be assured the memory will be in a write protected state, provided the  $V_{CC}$  fall time is not less than  $t_F$  The M48Z08/18 may respond to transient noise spikes on  $V_{CC}$  that reach into the deselect window during the time the device is sampling  $V_{CC}$ . Therefore, decoupling of the power supply lines is recommended.

When  $V_{CC}$  drops below  $V_{SO}$ , the control circuit switches power to the internal battery which preserves data. The internal button cell will maintain data in the M48Z08/18 for an accumulated period of at least 11 years when  $V_{CC}$  is less than  $V_{SO}$ .

As system power returns and  $V_{CC}$  rises above  $V_{SO}$ , the battery is disconnected, and the power supply is switched to external  $V_{CC}$ . Write protection continues until  $V_{CC}$  reaches  $V_{PFD}$  (min) plus  $t_{rec}$  (min). E should be kept high as  $V_{CC}$  rises past  $V_{PFD}$  (min) to prevent inadvertent write cycles prior to system stabilization. Normal RAM operation can resume  $t_{rec}$  after  $V_{CC}$  exceeds  $V_{PFD}$  (max). For more information on battery storage life refer to the application note AN1012.

M48Z08, M48Z18 Operation modes

### 3.4 V<sub>CC</sub> noise and negative going transients

 $I_{CC}$  transients, including those produced by output switching, can produce voltage fluctuations, resulting in spikes on the  $V_{CC}$  bus. These transients can be reduced if capacitors are used to store energy which stabilizes the  $V_{CC}$  bus. The energy stored in the bypass capacitors will be released as low going spikes are generated or energy will be absorbed when overshoots occur. A ceramic bypass capacitor value of 0.1  $\mu$ F (as shown in *Figure 7*) is recommended in order to provide the needed filtering.

In addition to transients that are caused by normal SRAM operation, power cycling can generate negative voltage spikes on  $V_{CC}$  that drive it to values below  $V_{SS}$  by as much as one volt. These negative spikes can cause data corruption in the SRAM while in battery backup mode. To protect from these voltage spikes, STMicroelectronics recommends connecting a Schottky diode from  $V_{CC}$  to  $V_{SS}$  (cathode connected to  $V_{CC}$ , anode to  $V_{SS}$ ). Schottky diode 1N5817 is recommended for through hole and MBRS120T3 is recommended for surface mount.

Maximum ratings M48Z08, M48Z18

### 4 Maximum ratings

Stressing the device above the rating listed in the absolute maximum ratings table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the operating sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

| Table 5 | Absolute | maximum | ratings |
|---------|----------|---------|---------|
|---------|----------|---------|---------|

| Symbol                          | Parameter   |         | Value     | Unit |
|---------------------------------|---|---------|-----------|------|
| T <sub>A</sub>                  | Ambient operating temperature                             | Grade 1 | 0 to 70   | °C   |
| T <sub>STG</sub>                | Storage temperature (V <sub>CC</sub> off, oscillator off) |         | -40 to 85 | °C   |
| T <sub>SLD</sub> <sup>(1)</sup> | Lead solder temperature for 10 seconds                    |         | 260       | °C   |
| V <sub>IO</sub>                 | Input or output voltages                                  |         | -0.3 to 7 | V    |
| V <sub>CC</sub>                 | Supply voltage  |         | -0.3 to 7 | V    |
| Io                              | Output current  |         | 20        | mA   |
| P <sub>D</sub>                  | Power dissipation   |         | 1         | W    |

Soldering temperature of the IC leads is to not exceed 260 °C for 10 seconds. Furthermore, the devices shall not be exposed to IR reflow nor preheat cycles (as performed as part of wave soldering). ST recommends the devices be hand-soldered or placed in sockets to avoid heat damage to the batteries.

**Caution:** Negative undershoots below –0.3 V are not allowed on any pin while in the battery backup mode.

### 5 DC and AC parameters

This section summarizes the operating and measurement conditions, as well as the DC and

AC characteristics of the device. The parameters in the following DC and AC characteristic tables are derived from tests performed under the measurement conditions listed in the relevant tables. Designers should check that the operating conditions in their projects match the measurement conditions when using the quoted parameters.

| Table 6. | Operating | and AC | measurement | conditions |
|----------|-----------|--------|-------------|------------|
|----------|-----------|--------|-------------|------------|

| Parameter                                       |         | M48Z08      | M48Z18     | Unit |
|---|---------|-------------|------------|------|
| Supply voltage (V <sub>CC</sub> )               |         | 4.75 to 5.5 | 4.5 to 5.5 | V    |
| Ambient operating temperature (T <sub>A</sub> ) | Grade 1 | 0 to 70     | 0 to 70    | °C   |
| Load capacitance (C <sub>L</sub> )              |         | 100         | 100        | pF   |
| Input rise and fall times                       |         | ≤ 5         | ≤ 5        | ns   |
| Input pulse voltages                            |         | 0 to 3      | 0 to 3     | V    |
| Input and output timing ref. voltages           |         | 1.5         | 1.5        | V    |

Note: Output Hi-Z is defined as the point where data is no longer driven.

| V <sub>OH</sub>                | Output high voltage           | I <sub>OH</sub> = -1 mA                 | 2.4  |                       | V    |

Table 8. DC characteristics

<sup>2.</sup> Outputs deselected.

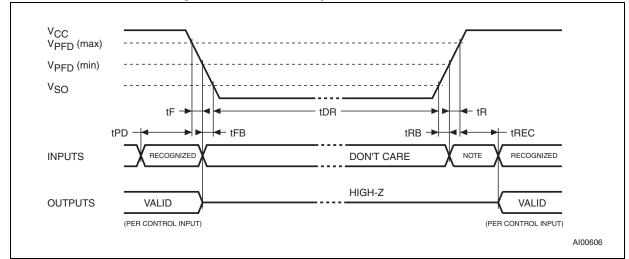

Figure 9. Power down/up mode AC waveforms

Note:

Inputs may or may not be recognized at this time. Caution should be taken to keep  $\overline{E}$  high as  $V_{CC}$  rises past  $V_{PFD}$  (min). Some systems may perform inadvertent WRITE cycles after  $V_{CC}$  rises above  $V_{PFD}$  (min) but before normal system operations begin. Even though a power on reset is being applied to the processor, a reset condition may not occur until after the system is running.

<sup>1.</sup> Valid for ambient operating temperature:  $T_A = 0$  to 70 °C;  $V_{CC} = 4.75$  to 5.5 V or 4.5 to 5.5 V (except where noted).

**Symbol** Parameter<sup>(1)</sup> Min. Max. Unit  $\overline{E}$  or  $\overline{W}$  at  $V_{IH}$  before power down 0  $t_{PD}$ μs t<sub>F</sub>(2)  $V_{PFD}$  (max) to  $V_{PFD}$  (min)  $V_{CC}$  fall time 300 μs  $t_{\text{FB}}^{\phantom{\overline{\text{(3)}}}}$ V<sub>PFD</sub> (min) to V<sub>SS</sub> V<sub>CC</sub> fall time 10 μs  $V_{PFD}$  (min) to  $V_{PFD}$  (max)  $V_{CC}$  rise time 0  $t_R$ μs  $V_{SS}$  to  $V_{PFD}$  (min)  $V_{CC}$  rise time 1 μs  $t_{RB}$  $\overline{\mathsf{E}}$  or  $\overline{\mathsf{W}}$  at  $\mathsf{V}_\mathsf{IH}$  before power up 2  $t_{REC}$ ms

Table 9. Power down/up AC characteristics

Table 10. Power down/up trip points DC characteristics

| Symbol                         | Parameter <sup>(1)(2)</sup>       |        | Min. | Тур. | Max. | Unit  |
|--------------------------------|-----------------------------------|--------|------|------|------|-------|
| V                              | Power-fail deselect voltage       | M48Z08 | 4.5  | 4.6  | 4.75 | V     |
| V <sub>PFD</sub>               | Power-rail deserect voltage       | M48Z18 | 4.2  | 4.3  | 4.5  | V     |
| V <sub>SO</sub>                | Battery backup switchover voltage |        |      | 3.0  |      | V     |
| t <sub>DR</sub> <sup>(3)</sup> | Expected data retention time      |        | 11   |      |      | YEARS |

<sup>1.</sup> All voltages referenced to V<sub>SS</sub>.

<sup>1.</sup> Valid for ambient operating temperature:  $T_A = 0$  to 70 °C;  $V_{CC} = 4.75$  to 5.5 V or 4.5 to 5.5 V (except where noted).

V<sub>PFD</sub> (max) to V<sub>PFD</sub> (min) fall time of less than t<sub>F</sub> may result in deselection/write protection not occurring until 200 μs after V<sub>CC</sub> passes V<sub>PFD</sub> (min).

<sup>3.</sup>  $V_{PFD}$  (min) to  $V_{SS}$  fall time of less than  $t_{FB}$  may cause corruption of RAM data.

<sup>2.</sup> Valid for ambient operating temperature:  $T_A = 0$  to 70 °C;  $V_{CC} = 4.75$  to 5.5 V or 4.5 to 5.5 V (except where noted).

<sup>3.</sup> At 25 °C,  $V_{CC} = 0 \text{ V}$ .

## 6 Package mechanical data

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK packages, depending on their level of environmental compliance. ECOPACK specifications, grade definitions and product status are available at: <a href="https://www.st.com">www.st.com</a>. ECOPACK is an ST trademark.

M48Z08, M48Z18 Part numbering

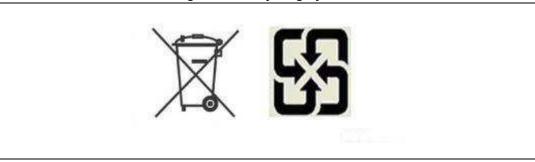

# 7 Part numbering

**Table 12. Ordering information** 

| Order code    | Package   | Temperature range | Speed | Supply voltage  |
|---------------|-----------|-------------------|-------|---|
| M48Z08-100PC1 | PDIP 28.7 | 0 to 70 °C        | -100  | V <sub>CC</sub> = 4.75 to 5.5 V; V <sub>PFD</sub> = 4.5 to 4.75 V |
| M48Z18-100PC1 | FDIF 20.1 |                   |       | V <sub>CC</sub> = 4.5 to 5.5 V; V <sub>PFD</sub> = 4.2 to 4.5 V   |

#### 8 Environmental information

Figure 11. Recycling symbols

This product contains a non-rechargeable lithium (lithium carbon monofluoride chemistry) button cell battery fully encapsulated in the final product.

Recycle or dispose of batteries in accordance with the battery manufacturer's instructions and local/national disposal and recycling regulations.

M48Z08, M48Z18 Revision history

## 9 Revision history

Table 13. Document revision history

| Date        | Revision | Changes   |  |
|-------------|----------|---|--|
| Mar-1999    | 1        | First issue   |  |
| 19-Jul-2001 | 2        | 2-socket SOH and 2-pin SH packages removed; reformatted; temperature information added to tables (Table 7, 8, 3, 4, 9, 10). |  |
| 19-Dec-2001 | 2.1      | Remove all references to "clock".   |  |
| 21-Dec-2001 | 2.2      | Changes to text to reflect addition of M48Z08Y option.  |  |
| 20-May-2002 | 2.3      | Modify reflow time and temperature footnotes (Table 5).   |  |
| 10-Sep-2002 | 2.4      | Remove all references to "SNAPHAT" and M48Z08Y part (Figure 1; Table 5, 6, 3, 4, 10, 12)                                    |  |
| 01-Apr-2003 | 3        | v2.2 template applied; updated test condition (Table 10).   |  |
| 28-Aug-2004 | 4        | Reformatted; removed references to 'crystal' (Figure 1).  |  |
| 14-Dec-2005 | 5        | Updated template, Lead-free text, removed footnote (Table 8, 12).   |  |
| 24-Mar-2009 | 6        | Reformatted document; added text to Section 5: Package mechanical data; added Section 7: Environmental information.         |  |
| 27-May-2010 | 7        | Updated Section 3: Maximum ratings, Table 11; reformatted document; minor textual changes.                                  |  |
| 07-Jun-2011 | 8        | Updated footnote of Table 5: Absolute maximum ratings; updated Section 7: Environmental information.                        |  |
| 23-Sep-2020 | 9        | Added <i>Table 12: Ordering information</i> . Updated package name.   |  |
