mikroTFT is a breakout board for MI0283QT-9A 2.8" TFT color display with 320 x 240 pixel resolution, driven by ILI9341 display controller. TFT display is covered with a resistive touch panel which can be used as an input device. For further connectivity two 1x26 side headers are provided. Mounting holes (ø 2.29 mm) located in each corner simplify integration. Board is designed in the same form factor as **mikromedia** boards. This allows you to easily switch from mikroTFT to mikromedia, and vice-versa, while retaining most of the integration features.
