DESCRIPTION

SPECIFICATION

Table of contents

1. [Downloads](#)

The **320x240px** screen is driven by an **FT800** graphic controller which is supported in **Visual TFT**, the GUI design tool for rapid development of user interfaces.

Resistive touchscreens have a higher resistance to dust and water compared to capacitive screens. They can also be used with a gloved finger. Those two features make them a better option for applications where a more robust user interface is required.

The connector uses an **I2C/SPI** interface. To use it with various MikroElektronika hardware, a **Riverdi click** adapter board is available (interface between the connector on the display and a mikroBUS™ socket).
