

## Overview

The RSB Series is constructed of metallized stacked polyester film capacitor with radial leads of tinned wire. Radial leads are electrically welded to the contact metal layer on the ends of the capacitor winding. The capacitor is encapsulated in a self-extinguishing material meeting the requirements of UL 94 V-0.

## Applications

Typical applications include high performance, high temperature blocking, coupling, decoupling, bypassing and interference suppression in low voltage applications such as automotive. Not for use with the mains.

## Benefits

- Voltage range: 50 – 630 VDC
- Capacitance range: 0.001 – 2.2  $\mu$ F
- Lead spacing: 5 – 37.5 mm
- Capacitance tolerance:  $\pm$ 20%,  $\pm$ 10% standard,  $\pm$ 5% on request
- Climatic category: 55/125/56
- Tape and reel packaging in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of -55°C to +125°C
- Designed for high performance, high temperature applications

## Performance Characteristics

Capacitance Tolerance	±20%, ±10%, ±5% on request			
Category Temperature Range	-55°C to 125°C			
Voltage Derating	Above +85°C DC and AC voltage derating is 1.25%/°C			
Rated Temperature	+85°C			
Climatic Category	-55 to +125°C			
	Average relative humidity ≤ 75%			
	RH = 95% for 30 days per year			
	RH = 85% for further days limited by average value per year			
Test Voltage	1.6 x V <sub>R</sub> VDC for 2 seconds			
Capacitance Drift	Maximum 3% after a 2 year storage period at a temperature of +10°C to +40°C and a relative humidity of 40% to 60%			
Reliability	Operational life > 200,000 hours			
	Failure rate < 3 FIT, T = +40°C, V = 0.5 x V <sub>R</sub>			
	Failure criteria: open circuit, short circuit, cap change > 10%, DF 2 times the catalog limits, IR < 50 MΩ			
Maximum Pulse Steepness	dV/dt according to Table 1. For peak voltages lower than rated voltage (V <sub>pp</sub> < V <sub>R</sub> ), the specified dV/dt can be multiplied by the factor V <sub>R</sub> /V <sub>pp</sub> .			
Temperature Coefficient	+400 (±200) ppm/°C at 1 kHz			
Self Inductance	Approximately 6 nH/cm for the total length of capacitor winding and the leads			
Dissipation Factor tanδ	Maximum Values at +23°C			
		C ≤ 0.1 μF	0.1 μF < C ≤ 1.0 μF	C > 1.0 μF
	1 kHz	0.8%	0.8%	0.8%
	10 kHz	1.2%	1.2%	1.5%
	100 kHz	2.5%		
Insulation Resistance	Measured at +20°C, according to IEC 60384-2			
	Minimum Values Between Terminals			
		C ≤ 0.33 μF	C > 0.33 μF and < 1 μF	C > 1.0 μF
	V <sub>R</sub> ≤ 100 VDC	15,000 MΩ	5,000 MΩ • μF	1,000 MΩ • μF
	V <sub>R</sub> > 100 VDC	30,000 MΩ	10,000 MΩ • μF

## Soldering Process

The implementation of the RoHS Directive has required the selection SnAuCu (SAC) alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of 183°C for SnPb eutectic alloy to 217°C – 221°C for the new alloys. As a result, the heat stress to components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Wave soldering can be destructive especially for mechanically small polypropylene capacitors and great care must be taken during soldering. The solder profiles from KEMET are highly recommended. You may also refer to the wave soldering curve from IEC Publication 61760–1 Edition 2. Please consult KEMET with any questions.

## Disclaimer

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed.

All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.
